Effect of Yogic Exercise on Emotional Maturity of B.Ed. Students

Dr. Mahesh Kumar Muchhal¹*, Arun Kumar²

ABSTRACT

The sample of the present study comprised 100 Students of B.Ed class from colleges of Ambala district. The post test experimental and control group design was followed. There were two groups (control group and experimental group) 50 students were assigned in each group. The experiment was conducted for 30 days with yoga exercise Shatkriyas (Kapalbhati and Trataka), Pranayamas (Anulom-Vilom, Shitali, Shitkari and Bhramari) and Meditation regularly in the morning. Emotional Maturity Scale by Yashvir Singh & Dr. Mahesh Bhargava (1990) was used.

Keywords: Yoga exercise and Emotional Maturity.

The wealth of India, Yoga is one of the greatest gifts of India to the world. Part of daily routine for the Indians of yore, today yoga has become one of the most popular systems of health and healing, all over the world. It is also a spiritual pursuit for many seekers of truth. In the modern world, western countries like America use yoga as a tool for mental, physical and spiritual upliftment. Life is full of stress as a result of existence in the fast, mechanized and competitive way of life. Moreover modernization, urbanization, materialism, competition and ever changing trends of society tend to put stress on individuals of all age groups.

In the present circumstances, youth as well as children are facing difficulties in life. These difficulties are giving rise to many psychosomatic problems such as anxiety, tension, frustration and emotional upsets in day to day life. So the study of emotional life is now emerging as a descriptive science, comparable with anatomy it deals with an inter play of forces with intensities and quantities. Available tests are crude and measure chiefly the degree of dependence. But the test measures the difficult aspects of emotional maturity. As self-acceptance is an important aspect of maturity ways Wenkart, it must be preceded by acceptance from others. Emotional maturity is concerned primarily with self-control and expression. The teacher develops through a variety of experiences. For instance, the school can help the adolescents to arrange situations that will enable them to judge and evaluate their own behaviour. The school can provide a variety of supervised playground activities that permit children to free rather than rigidly prescribe art expression and help children take part in discussions in the classroom or in private conference.

Emotional maturity has not only a negative aspect but also positive one and emotional upsets in day-to-day life.

Actually, emotional maturity is not the only effective determinant of personality pattern but it also helps to control the growth of adolescent’s development. The concept of mature emotional behaviour at any level is that which reflects the fruits of normal emotional development. A person who is able to keep his emotions under control, who is able to break delay and to suffer without self-pity might still be emotionally stunted and childish.

**REVIEW OF LITERATURE**

Emotional maturity is related to environmental factors (Kaur, 2000). Emotional maturity and intelligence are related (Kaur, 2001). Slum and urban areas children’s have different emotional maturity (Muley, Patnam and Vasekar, 2003). Emotional expression skills of adolescents should be channelized for their effective mental health and personality development. Also post-adolescent boys have higher emotional maturity than females (Chouhan and Bhatnagar, 2003). There exists a positive relationship between emotional maturity and self-concept of secondary level students (Gakhar, 2003). There exists some relationship between emotional intelligence and trait anxiety in adolescents (Markham, 2004). Emotional intelligence is related to ethical decision making (Scott, 2004).

**OBJECTIVES**

1. To study the emotional maturity of yoga students and Non-yoga students of B.Ed.
2. To compare the emotional maturity of yoga students and Non-yoga students of B.Ed.

**Hypotheses**

H1 There is no significant difference in Emotional maturity of B.Ed students of experimental and control groups at pre-test.

H2 There is no significant difference in Emotional maturity of B.Ed students of experimental and control groups at post-test.

H3 There is no significant difference in the mean reduced scores of Emotional maturity between B.Ed students of experimental and control groups.

**Design of the Study**

It was an experimental study based on randomized matching A pre-test, post-test, control group design with one experimental group was employed to conduct the present experimental study. Treatment was the independent variable and dependent variable is academic stress. Training in Yoga exercise Shatkriyas (Kapalbhati and Trataka), Pranayamas (Anulom-Vilom, Shitali, Shitkari and Bhramari) and Meditation was given to the experimental group for 30 days one hour in morning regularly.
Effect of Yogic Exercise on Emotional Maturity of B.Ed. Students

Sample
Sample of 100 B.Ed from colleges of Ambala Districts were taken in the present study. This was further categorized in to control group (50) and experimental group (50). We used randomize method to select the B. Ed students for data.

Tools Used
1. Emotional Maturity Scale by Yashvir Singh & Dr. Mahesh Bhargava (1990)
2. Shatkriyas (Kapalbhati and Trataka)
3. Pranayamas (Anulom-Vilom, Shitali, Shitkari and Bhramari) & Meditation

RESULTS

Table 1, Means, S.D.’s and t-ratios for pre-test and post-test scores on Emotional Maturity of the Experimental and Control Groups.

DISCUSSION
Entries made in Table 1 Hypothesis H1 “There is no significant difference in Emotional maturity of B.Ed students of experimental and control groups at pre-test” was accepted. Hypothesis H2 “There is no significant difference in Emotional maturity of B.Ed students of experimental and control groups at post-test” was rejected in favour of the finding that yogic practices helped in improving of Emotional Maturity.
Entries made in Table 2 t-ratio for the mean reduced scores between the experimental and control groups on Emotional maturity was found to be significant at 0.01 level of confidence (t=9.648). Thus, H3 was rejected as the experimental group students who were exposed to yogic practices exhibited improvement Emotional maturity as compared to their counterparts of the control group.

**CONCLUSION**

On the behalf of above discussion we can say that yoga effects emotional maturity of the B.Ed students. We can emotionally stable through yoga practices can yoga effects our nervous system and glandular system which makes our emotionally mature. So yoga helps to improve emotional maturity.
