Handloom & Weavers’ Cooperative Societies in Assam - A Study
Dr. Dilip Ch. Das
Asst. Prof. in Commerce, Goreswar College, Goreswar (BTAD) Baksa, Assam, India

Abstract
Handloom sector is a major non-farm employer in the country. About 16 million weavers depend on this sector in the country. Handloom weaving is one of the most important nonagricultural sources of income in India. In the present paper an attempt has been made to analyze the economics of weavers’ cooperative societies in twelve selected districts of Assam. The study is based on a sample of 60 weavers’ cooperative societies. To find out the profile, production, marketing and financial management of weavers’ cooperative society’s primary and secondary data has also been collected. The study reveals that central and state governments have evolved many schemes to uplift the economic condition by providing incentives in the form of grants and loans to impart training on new designs, modernization of looms etc. But handloom weaving units continue to be in the grip of problems. Therefore the purpose of this paper is to familiarize with the current status of handloom Weavers’ Cooperative Societies.

Key words- Weavers’ cooperative societies, production, marketing, financial management.

Sualkuchi is Known As “MANCHESTER OF ASSAM”

Introduction: The handloom sector occupies a distinct and unique place in the Indian economy, besides being the largest generator of non-farm rural employment. While available statistics indicate an economic sector of considerable size, there is still immense scope for expansion. The handloom sector in indeed capable of exponential growth, with proper identification of its needs, a reasonable level of resource input and structural attention. Nonfarm development is a strategic priority for many developing countries during their economic transformation from an agricultural to an industrial society. Handloom industry plays an important role in generating local employment. The installed world capacity of handloom is 4.60 millions. India stands number one in the global scenario of handlooms which posses 85% (3.90 million) of the world agriculture in India. Nearly 23.77 lakh handlooms provide direct or indirect employment to 43.32 lakh weavers and allied workers, of which 36.33 lakh workers stay in rural areas and 6.98 lakh workers stay in urban areas and 77.90 per cent are women, 10.13 per cent are scheduled tribes, 18.12 per cent belongs to scheduled castes and 45.18 per cent OBC and 26.57 per cent are from other
castes. Nearly 78 percent of handloom workers are women among which Assam records the highest (Handloom Census 2013). The handloom co-operatives are a major segment accounting for a large proportion of weavers as members. The Government of India implemented many schemes to support the handloom sector. Co-operation has a very important role to play for the economic and social upliftment of an economy like Assam. Moreover Weavers’ cooperative society has been playing a vital role in the country’s economy by forming part of its rich heritage, and exemplifying the artistry of the weavers. The cooperative societies are provided marketing assistance from Development Commissioner (Handloom and Textile) and State Government under various schemes and they are given opportunities to participate in fairs and exhibitions to sell their products.

**The objectives of the study:**

i) To analyze the business operation of selected handloom weaving units of Assam.

ii) To suggest measures for the growth of handloom industry

**Methodology:** Weavers’ Cooperative Societies were selected randomly from the twelve selected districts of Assam for the study. A multistage purposive cum random sampling design was followed for selection of twelve districts of Assam in view of the prevalence of practice of weaving in those districts. A total of 60 registered rural based Weavers’ Cooperative Societies were selected. The study involves the collection of primary as well as secondary data. The primary data were collected directly from handloom weaving units and constituting the major source of data for the study. For this purpose an interview schedule was prepared for obtaining necessary information. The secondary data relating to handloom industry were collected from the recorded reports from the office of the handloom and textiles, published and unpublished literature and also internet source has been referred to. The collected data were tabulated and analyzed properly in accordance with the objectives of the present study. The collected data has been analyzed and interpreted with the use of some statistical tools such as frequency distribution, percentage, mean, standard deviation to arrive at afore said objectives. Handloom: Handloom weaving is a way of life for the people of Assam. It is inexorably linked with the Assamese culture and heritage. Handloom industry of Assam is known for its rich glorious tradition of making exquisite handloom and handicraft products. Handloom is a precious part of generation legacy and has been kept alive by the skilled weavers engaged in the age old tradition of weaving since antiquity in Assam.

Employment Generation: As per Handloom Census Assam has 11.11 lakh looms and more than 14.01 lakh weavers. Besides more than 16.43 lakh handloom workers are working in handloom sector. About 30.44 lakh weavers and allied worker are involved with handloom activities in the state. Since handloom weaving provides direct and indirect employment to such a large number of people, the handloom sector plays an important role in terms of employment generation and socio-economic development of Assam.

Achievement: There are 13576 villages under 209 Handloom Demonstration Circles with 1316163 weavers for handloom activities in the state. The 98 weavers Extension units and 20 Handloom Production Centres produces 65.3 thousand metres Handloom fabrics during the year 2013-14.

Steps for Upgradation: The State Govt. has given thrust on upgradation of technology and skills to enhance production and to create additional employment opportunities and higher value addition and higher income generation for reevers, spinners and weavers. Emphasis has also been given for creation of adequate infrastructure facilities such as common facility centre with facilities for dying, weaving as well as marketing facilities. Introduction of modern new designs using CAD/CAM and other modern technologies for improvement of quality production and for value addition of handloom products. It is also proposed to establish a Design Museum at the Handloom Research and Designing Centre to keep the traditional, ethnic, cultural designs of different castes, communities and that of different kingdoms of the north eastern region as well as other parts of the country.

It is found that most of the weavers did not take any formal training for learning the production process as they learn on-the-job while observing and helping the older family members as well as master weavers. But a few of them took formal training course at the Government centres for both skilled and ordinary weaving styles. Moreover, in traditional non-commercial areas it was observed that the weavers preferred throw shuttle looms having low productivity which is easier to operate and also cheap. The weavers due to their poor economic condition cannot convert their looms to fly shuttle one. The loom owners of Assam are getting a ready made domestic market for their products. But there is no proper marketing channel for displaying and selling the products outside the state, particularly ‘Sarees’, which could get a good market in the national arena.

ARTFED possesses 52 sales counters, one weaving unit in the state and 5 sales counters outside the state (1 each at Kolkata, Delhi, Joypur, Indore & Kanpur). They collect fabrics from some reputed weavers of Sualkuchi. During the period under reference, ARTFED
Handloom & Weavers’ Cooperative Societies in Assam - A Study

collects 3.62% (1373.59 sq. metres) of the total annual products from the sample units. They generally collect plain sheets where the ARTFED designers put designs on for selling them both in national and international markets. It is to be noted that ARTFED is the only channel through which handloom and the products so far exported are muga quilt, pillow cover, cushion cover, plain sheets, bed cover, curtain etc.

Findings:

- **Profile of Weavers’ Cooperative Societies:** The entire handloom industry comes under the umbrella of Ministry of Textiles; National Handloom Development Corporation Limited at the central level, Directorate of Handlooms and Textiles Development Corporation, The Assam State Handloom Weavers’ Cooperative Society Limited at state level and Primary Weavers’ Cooperative Societies at village level. Weavers’ Cooperative Societies were found to be registered under the respective Office of the Handloom and Textiles, Government of Assam in each district. Membership strength of the Weavers’ Cooperative Societies was found to be ranged from 100 to 250 members. The lower age limit for membership was 18 years in all the societies. The study indicates the massive involvement of female weavers in the Weavers’ Cooperative Society in Assam. The probable reason may be because weaving is largely household profession and passed on through generations. The entire Weavers’ Cooperative Societies had Board of Directors and General Body, for effective functioning of WCSs. The General Body consisted of the enrolled members of the WCSs and the Board of Directors consisted of the selected members from the General Body. Constitution was found in all the societies and was followed meticulously. The entire Weavers’ Cooperative Societies were conducting the general body meeting once in a year. It was found that the entire Weavers’ Cooperative Societies had maintained the records in respect of membership, attendance of members, stock of raw material, stock of end products and carrying of periodical inspection.

- **Production and marketing of handloom products:** Production of handloom cloth involves several processes. These processes can be broadly categorized as pre loom and post loom activities in addition to weaving. The pre loom processes include bobbin winding, warping, denting, etc. The post loom process includes stitching, ironing, packaging etc. During the period of investigation, it was seen that all the weavers’ cooperative societies were producing *Gamusa* (Towel), *Mekhla*, *Chaddar* and *Mekhla-Chaddar set* (traditional dress worn by Assamese women), with blouse piece, *Riha* (upper garment worn by women), Saree, Blouse Piece, Door mat, Men’s Kurta, Lady’s Kurta, Salwar Kameez, Handkerchief and Stole. Shawl, Cushion cover, Bag and Table mat *Tongali* (piece of cloth worn by men during Bihu Dance), Table Runner, Curtain fabrics, Bed sheet, Dhoti and Shirts. Cotton was the most common yarn used by all the societies. Silk (mulberry, muga, eri and tassar), Rayon, Polyester, Acrylic yarn and Zari were also found to be used by all the selected weavers’ cooperative societies. Plain weave and twill weaves
were generally found in all the selected weavers’ cooperative society. Majority of weavers’ cooperative societies produced article regularly and only few i.e. 6.67 per cent produced article as per order. During investigation, it was observed that the entire Weavers’ Cooperative societies were pricing the product independently and fixing the cost with minimum profit margin. Business overheads include ongoing expenses such as rent, electricity, etc. The selected Weavers’ Cooperative societies were using retail sale. Only 63.33 per cent were using whole sale technique of selling their products. All Weavers’ Cooperative societies were marketing their product from their unit sometime within the village and also through exhibition cum sale, fair and expo. Exhibition, fair and expos were organized by the Development Commissioner (Handloom and Textile, Government of Assam). Only few Weavers’ Cooperative societies such 20 per cent of Weavers’ Cooperative societies were using special sale counter of their own for marketing their product.

Management of handloom & weaving unit: The entire selected Weavers’ Cooperative societies were having saving account at bank. During the period of investigation, it was seen that the entire Weavers’ Cooperative societies had received the financial assistance in terms of kind’s i.e. raw materials, looms and accessories, etc. It was also observed that the entire selected Weavers’ Cooperative societies were getting assistance from Assistant Directors, Directorate of Handloom and Textiles, Govt. of Assam at the respective Districts. The entire selected Weavers’ Cooperative Societies were doing audit annually by the auditors as assigned from the offices of respective districts

- **Training on marketing:** Training to enhance the skills of weavers in manufacturing and marketing aspects in changing business environment. Effective implementation of various policies and programs could be successful when there would be proper integration, cooperation and coordination from the government. Skill and design development exercises can be conducted for the weavers which will help them to understand and develop new product range as well as improve their design sensibility.

- **Promotional strategies:** Societies should give more importance to promotional strategies and government should give promotion subsidy to well established societies. Society can employ interesting sales promotion tools like coupons, free gifts etc to create interest and excitement to the customer to buy handloom product. Publicity is one of the essential factors, which influence the sale of the products. Therefore government should provide special publicity drive to promote handloom products.

- **Handloom mark:** The Government should organize more awareness programmes in popularizing the handloom mark to create unique brand image for genuine Handloom Products. Branding of products and youth icons should be used to make handloom fabrics into a fashion statement.
Quality in handloom products: To bring superior quality in handloom products, the pre and post loom process development should take place. Innovative and faster weaving processes and techniques to increase efficiency of weavers as well as loom will make handloom more competitive and profitable. Weaving of damask fabric for national or international market could be an added attraction.

Finishing of the product: Using various finishing techniques and product packaging for better marketing. Calendaring unit can be set up in weavers’ service centre of each district.

Suggestions for better growth of handloom industry:

- Up gradation and Modernization: Government should give attention in up gradation and modernization of loom, equipments and infrastructural development for the betterment of the handloom industry.
- Product Diversification: Redesigning of the existing traditional products. The existing product can be made softer, good textures and with standard size. The existing traditional motifs can be used for new product development and diversification and will give the product a local identity. Society should try to make damask fabric.

Conclusion: The Handloom Textiles constitute a timeless part of the rich cultural Heritage of India. The element of art and craft present in Indian handlooms makes it a potential sector for the upper segments of market, domestic as well as global. However, the sector is beset with manifold problems such as obsolete technologies, unorganized production system, low productivity, inadequate working capital, conventional product range, weak marketing link, overall stagnation of production and sales and, above all, competition from power loom and mill sector. As a result of effective Government intervention through financial assistance and implementation of various developmental and welfare schemes, the handloom sector, to some extent, has been able to tide over these disadvantages. Thus, Handloom forms a precious part of the generational legacy and exemplifies the richness and diversity of our country and the artistry of the weavers.
