#### Abstract

In article principal views of large-scale natural and technogenic accidents, social conflicts and shocks are considered. As a result of statistical research considerable chronological anomaly is found out.

Keywords: accidents; shocks; conflicts; statistics; law.
Introduction. Research of accidents is one of actual problems of a modern science. In article it is shown, that the largest natural, technogenic and political disasters occur not incidentally, and according to the certain temporary law.
V.I.Vernadsky, the founder of the doctrine about biosphere and a technosphere wrote, that «the history of a science is ... the instrument of achievement new», and «recurrence of the phenomena in time is one of the brightest displays of law» [1]. He considered development of a science and technics as process for which the natural-science method of research is applicable: «similar displays cannot be casual, and are so subordinated to weight and a measure, as movement of astronomical objects or a course of chemical reactions» [1].

The method of research used in article, is based on the statistical analysis of chronology by means of parametrization of dates of events and check of corresponding informative property. Parameters are used: numbers of days from the beginning of chronology N , from the beginning of year n and number of year Y .

Intervals of time between events are investigated: $\Delta \mathrm{N}, \Delta \mathrm{n}, \Delta \mathrm{Y}$.

$$
\Delta N=N\left(\text { Date }_{2}\right)-N\left(\text { Date }_{1}\right), \Delta n=n\left(\text { Date }_{2}\right)-n\left(\text { Date }_{1}\right), \Delta \mathrm{Y}=\mathrm{Y}\left(\text { Date }_{2}\right)-\mathrm{Y}\left(\text { Date }_{1}\right) .
$$

Date $_{1}$, Date ${ }_{2}$ are the dates of the investigated events.
Informative property is the exact or approximate divisibility of intervals of time to informative codes $\mathrm{C}: \Delta \mathrm{N}: \mathrm{C}, \Delta \mathrm{n}: \mathrm{C}, \Delta \mathrm{Y}: \mathrm{C}$.

Realization of informative property in article is called as coincidence.
The founder of solar biology A.L.Chizhevsky one of the first has applied mathematical methods to studying of history of the nature and a society. He connected accidents in biosphere with the periods of solar activity and one of the first investigated influence of space factors on historical process [2].

Significant achievement of modern science was creation of the mathematical theory of accidents [3]. Its founder R.Tom marked, that his theory will be coordinated with idea of the space nature of accidents [3].

In article idea of A.L.Chizhevsky and R.Tom develops on the basis of the statistical approach. As codes, abstractly reflecting influence of the space factor parameters of a gravitational constant will be used: $G=6,67 \ldots \cdot 10^{-11} \mathrm{~N} \cdot \mathrm{~m}^{2} / \mathrm{kg}^{2}$ [4,5]. Greatest of allowable integer codes are the most informative. Therefore it is expedient to write down a constant as: $G=667 \ldots \cdot 10^{-13} \mathrm{~N} \cdot \mathrm{~m}^{2} / \mathrm{kg} 2$. The values of a mantissa 667 and the value of a degree 13 are the basic informative codes.

Probabilities of informative property: only one of $C$ casually taken natural numbers is dividing into number $C(\mathrm{P}=1 / C, C=13,667)$. In detail probability's and statistical calculation is considered in item 3.

Multiple coincidences are priority and allocated with underlining.
The description of investigated set of chronological data
"Center" of chronological anomaly are dates of the unique great person K.Neron (15.12.379.06.68), one of the most well-known Roman emperors. He causes significant interest in researchers. In France the International Society of studying of Neron (Societe Internationale d'etudes neroniennes) [5] is created.

Uniqueness of his person is caused by the following. Emperor Neron is the first person declared by the AntiChrist [4, 5]. Scientists assert, that the well-known bible prophecy on great accident "Apocalypse" is appreciably devoted to the Neron's person [4, 5].

Remarkable event of the period of Neron's board is great accident of capital of empire - the fire of great city largest in an ancient history. Neron has been accused of an arson and first of the Roman emperors subject to a general damnation (according to certificates he enthusiastically observed a huge fire) [4, 5]. Thus, Neron's name is closely connected to a theme of grandiose accident and of the forces hostile to christianity.

In articles [7-9] very remarkable fact is proved, that dates of Neron's life also are connected phenomenal with subject matter of accidents. Let's designate: $N_{1}{ }^{N}=N(15.12 .37), N_{2}{ }^{N}=N(9.06 .68)$, $n_{1}{ }^{\mathrm{N}}=n(15.12), n_{2}{ }^{\mathrm{N}}=n(9.06), \mathrm{Y}_{1}{ }^{\mathrm{N}}=37, \mathrm{Y}_{2}{ }^{\mathrm{N}}=68$.

Hereinafter the index 1 concerns to the first date of the subject, an index 2 - to the second. Number of day on old style we shall mark with sign ${ }^{*}: N^{*}$. (For dates of XX century the difference is equal to 13 days: $N^{*}=N-13$ ).

1. Dates of history of the largest accidents
1.1. Space thermonuclear accidents. The most scale explosions, known to astrophysics are thermonuclear explosions of supernew stars. Dates of only two unique supernew stars SN1054 and SN1006, visible even in the day time sky are documentarily noted. Rest of SN1054 is characterized in the scientific literature as « most amazing of all rests of supernew stars of our Galaxy » [4].

SN1054. Date 4.07.1054 is marked in Far East annals, the assumption therefore is proved, that on European time, was 3.07 .1054 more. Connection of dates of occurrence of a star and a birth of emperor Neron: $N-N_{1}{ }^{\mathrm{N}}-1=\underline{13 * 13 * 13 * 13 * 13 \text {. }}$

The star has disappeared from a sky 17.04.1056. Connection with date of death of emperor Neron: $N-N_{2}{ }^{\mathrm{N}}+1 \vdots 13 * 13$.

SN1006 has appeared 30.04.1006. It is less known, but phenomenal: $N-N_{2}{ }^{\mathrm{N}}-1 \vdots 13 * 13$.
The dates of the most protruding astronomers studied supernew stars [4, 5], are characterized by the same property:
T. Brahe (14.12.1546-13.10.1601): $n_{1}{ }^{\mathrm{N}}-n_{1}-1 \vdots 13 * 13$.
F. Zwicky (14.02.1898-18.02.1974): $\mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}}-2 \vdots 13 * 13$.
I.S. Shklovsky (1.07.1916-3.03.1985): $N_{1}-N_{2}{ }^{\mathrm{N}}: 667, N_{1}-N_{1}{ }^{\mathrm{N}}+2 \vdots 13 * 13, n_{1}{ }^{\mathrm{N}}-n_{1}+2 \vdots 13 * 13$.
1.2. Meteoric accidents and comet. Galley's Comet is the most well-known and has appeared according to a prediction of pathbreakers 12.03.1759: $\mathrm{Y}-\mathrm{Y}_{2}{ }^{\mathrm{N}}-1 \vdots 13^{*} 13, N-N_{1}{ }^{\mathrm{N}}-2 \vdots 13^{*} 13$.

The most famous meteoric accidents [4, 5]:
Accident of the Tungus meteorite 30.06.1908: $n_{1}{ }^{\mathrm{N}}-n+1=13 * 13$.
L.A. Kulik (19.08.1883-14.04.1942), the first researcher of the Tungus phenomenon:
$N_{1}-N_{2}{ }^{\mathrm{N}}-1 \vdots 667, N_{1}{ }^{*}-N_{2}{ }^{\mathrm{N}} \vdots 13 * 13$.
Arizon's crater is the most known and one of the world's largest. It was formed thousand years ago as a result of falling the huge meteorite similar Tungus.
G.K. Gilbert (6.05.1843-1.05.1918), chairman of the American society of geologists, first of large scientists studied crater: $N_{1}-N_{2}{ }^{\mathrm{N}} \vdots 13^{*} 13^{*} 137, N_{2}-N_{2}{ }^{\mathrm{N}}-2 \vdots 667, N_{2}{ }^{*}-N_{2}{ }^{\mathrm{N}}+2 \vdots 13^{*} 13$.
E. Shumeiker (28.04.1928-18.07.1997), the first has carried out the proof of space origin of Arizon's crater: $\mathrm{Y}_{1}-\mathrm{Y}_{2}{ }^{\mathrm{N}}-1 \vdots 13^{*} 13$.
D.M. Barrindger (25.05.1860-30.11.1929), the first researcher of Arizon's crater:

$$
\mathrm{Y}_{2}-\mathrm{Y}_{2}^{\mathrm{N}}-2 \vdots 13^{*} 13 ;\left(N_{2}-N_{1}^{\mathrm{N}}+3 \vdots 13^{*} 13^{*} 1363\right) .
$$

Explosion of a volcano of Krakatau (27.08.1883) is strongest of known, as a result of accident was lost 36000 person: $N-N_{1}{ }^{\mathrm{N}} \vdots 13 * 13$; $\left(N^{*}-N_{2}{ }^{\mathrm{N}}+3 \vdots 667\right)$.

The following eruption has taken place in 1927: $\mathrm{Y}-\mathrm{Y}_{2}{ }^{\mathrm{N}} \vdots 13 * 13$.
1.3. Earthquakes. In the list of the most known for the first it is usual refers to Lisbon's earthquake 1.11 .1755 (about 50000 victims) [4,5]: $N^{*}-N_{2}{ }^{\mathrm{N}}-2 \vdots 667$.

Great Chinese earthquake 23.01.1556 (a province of Shaanxi) is the greatest by quantity of victims (nearby 830000 person): $N-N_{1}{ }^{N}+1 \vdots 13 * 13$.

Earthquake in India in 1897 is considered by the strongest in history: $\mathrm{Y}-\mathrm{Y}_{1}{ }^{\mathrm{N}}-1 \vdots 13 * 13$.
The landslip 16.12.1920 (China) - the largest on a death toll also has been connected with earthquake ( 180000 victims): $n-n_{1}{ }^{N}-1 \vdots 13 * 13$.

Snow avalanches. The avalanche 31.05.1970 (Perus) - the largest (18 000 victims) and also is caused by earthquake: coincidences are not present.

The strongest in history of the Europe of an avalanche in the Italian Alpes 13.12.1916 (about 10000 victims): $N-N_{2}^{N}-1 \vdots 13^{*} 13, n_{1}{ }^{N}-n-2 \vdots 13^{*} 13$.

Flooding to 1887 (China) - the largest accident of a millennium: $\mathrm{Y}-\mathrm{Y}_{2}{ }^{\mathrm{N}}+1 \vdots 13$.
Hurricanes. Typhoon Bohola 13.11.1970 has brought to ruin the greatest quantity of people (200 000 person): coincidences are not present.

It has to be noted, that in article the largest accidents (with number of victims not less than 10000 ) are mainly considered only.
1.4. Nuclear catastrophes, conflicts, and history of development of a nuclear energy.

The nuclear weapon for the first time is applied 6.08 .1945 (Hiroshima). The largest failure on the atomic power station was 26.04.1986 (Chernobyl) [5]. We shall designate: $N_{\mathrm{H}}=N(6.8 .1945)$, $N_{\mathrm{CH}}=N(26.4 .1986) ; n_{\mathrm{H}}=n(6.08), n_{\mathrm{CH}}=n(26.04), \mathrm{Y}_{\mathrm{H}}=1945, \mathrm{Y}_{\mathrm{CH}}=1986$.

The beginning of a history of creation of a nuclear bomb
A. Einshtein's historical letter to the president of the USA is dated 2.08.1939. It is unique threefold coincidence to dates of Neron, Hiroshima's bombardment and Chernobyl's accident:

$$
N_{\mathrm{H}}-N+1=\underline{13 * 13 * 13}, N_{\mathrm{CH}}-N=\underline{13 * 1313}=13 * 13 * 101, N-N_{2}^{\mathrm{N}}=\underline{13 * 13 * 1348 * 1 * 3 .}
$$

Controlled chain reaction of nucleus of uranium for the first time has been carried out 2.12.1942: $N^{*}-N_{1}{ }^{\mathrm{N}}-2 \vdots 13^{*} 13$.
E. Fermi (29.09.1901-28.11.1954), the founder of reactor: $N_{2}-N_{1}{ }^{\mathrm{N}}=\underline{13 * 13 * 1381 * 3 .}$
L. Groves, the general, the head of the nuclear project: $\mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}} \vdots 13 * 13$.
R. Oppenheimer, the supervisor of studies of the project: $N_{1}{ }^{*}-N_{1}{ }^{\mathrm{N}}+2 \vdots 667$.
L. Szilard, the priority representative of the big group of participants of the nuclear project:
$\mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}}-2 \vdots 13^{*} 13$.
P. Tibbets (23.02.1915-1.11.2007), the commander of the bomber dumped the A-bomb to Hiroshima: $N_{1}{ }^{*}-N_{1}{ }^{\mathrm{N}}+2 \vdots 13^{*} 13 ;\left(N_{2}{ }^{*}-N_{2}{ }^{\mathrm{N}}+3 \vdots 667\right)$.

## Nuclear bombardments

Hiroshima: $N-N_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13, N^{*}-N_{2}{ }^{\mathrm{N}}+1 \vdots 13 * 13185$.
Nagasaki: $N-N_{2}{ }^{\mathrm{N}}-2 \vdots 13 * 13$.
H. Truman has given an order to dump A-bombs: $N_{2}{ }^{*}-N_{1}{ }^{\mathrm{N}}+1 \vdots 13 * 13$; $\left(N_{2}-N_{\mathrm{H}}+1 \vdots 667\right)$.

Representatives of the country injured of the nuclear weapon
H. Jukava (23.01.1907-8.09.1981), the most well-known Japanese nuclear physicist, he has solved a problem of stability of a atomic nucleus:

$$
N_{2}-N_{\mathrm{H}}=13 * 13 * 13 * 6 ;\left(N_{\mathrm{CH}}-N_{2}-1 \vdots 13 * 13 ; N_{2}-N_{2}^{\mathrm{N}}+1 \vdots 13 * 13\right) .
$$

Juriko Koike (was born 15.07.1952), the first woman - Minister of Defence of Japan. She has entered this post in July, 2007 after the large-scale political scandal which connected to a theme of nuclear bombardments of Hiroshima and Nagasaki and has received a significant echo all over the world: $N-N_{\mathrm{H}}=13^{*} 13^{*} 15 ;\left(N_{\mathrm{CH}}-N-1 \vdots 13^{*} 13 ; N-N_{1}{ }^{\mathrm{N}}-1 \vdots 666, N-N_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13\right)$.

Accident of the Chernobyl atomic power station:

$$
N-N_{2}{ }^{\mathrm{N}} \vdots 13^{*} 13, N^{*}-N_{2}^{\mathrm{N}} \vdots 13^{*} 13471 .
$$

Official closing Chernobyl station (15.12.2000): $n-n_{1}{ }^{\mathrm{N}}: 13^{*} 13$.
Responsible for Chernobyl's accident and its consequences:
V.A. Legasov (1.09.1936-27.04.1988), the known academician, a member of the governmental commission on elimination of consequences of Chernobyl's accident (has finished himself next day after second anniversary of failure): $N_{2}{ }^{*}-N_{1}{ }^{\mathrm{N}}-2 \vdots 667$.
V.P. Brjuhanov (was born 01.12.1935), director of the Chernobyl atomic power station (he is condemned for 10 years): $N^{*}-N_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13 \vdots 13^{*} 13117$.

> The Caribbean rocket - nuclear crisis

22-28.10.1962 world appeared on the verge of nuclear war:

$$
N_{1}^{*}-N_{1}{ }^{\mathrm{N}}+1 \vdots \underline{13 * 13 * 13}, N_{2}{ }^{*}-N_{2}{ }^{\mathrm{N}}+1 \vdots 13 * 1306 .
$$

The main persons of the conflict:
Jhon Kennedy (29.05.1917-22.11.1963) has declared the ultimatum of the USSR and Cuba, coincidence of the well-known president: $N_{1}{ }^{*}-N_{2}{ }^{\mathrm{H}}+1 \vdots 13 * 13 * 1332$.
N.S.Hrushchev (17.04.1894-11.09.1971) has ordered to place the nuclear weapon on Cuba: $N_{1}-N_{1}{ }^{\mathrm{N}}+1=13 * 13 * 1003^{*}(1+3), \mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}}+2 \vdots 13^{*} 13$.

Fidel Castro (was born 13.08.1927 [5]) has supported accommodation of rockets on Cuba:
$\mathrm{Y}-\mathrm{Y}_{2}{ }^{\mathrm{N}} \vdots 13^{*} 13, N-N_{1}{ }^{\mathrm{N}}-2 \vdots 13^{*} 13$.
Failures of nuclear submarines
The largest accident of nuclear submarine (USA 10.04.1963, 129 victims):

$$
N^{*}-N_{1}^{\mathrm{N}}=13 * 13 * 1387 * 1 * 3 .
$$

Known designers of nuclear submarines [4,5]:
V.N. Peregudov (28.06.1902-19.09.1967), the general designer of the first nuclear submarine the USSR: $N_{1}{ }^{*}-N_{1}{ }^{\mathrm{N}}-1 \vdots 667, n_{1}{ }^{\mathrm{N}}-n_{1}-1 \vdots 13 * 13$.
A.P. Aleksandrov, the head creation of reactors for the first nuclear submarines the USSR:
$N_{1}{ }^{*}-N_{1}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$.
I.D. Spassky (was born 2.08.1926), the main designer of nuclear submarines of the Russia:
$\mathrm{Y}-\mathrm{Y}_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$.
H.D. Recover (27.01.1900-08.07.1986), admiral, the main designer of reactors of the first nuclear submarines the USA: $N_{1}-N_{2}{ }^{\mathrm{N}}+3 \vdots 667$.
1.5. Laws of history of development and application of a nuclear energy Pathbreakers
M.G. Klaprot, the pathbreaker of uranium: $N_{1}-N_{1}{ }^{\mathrm{N}}+1 \vdots 13 * 13$.
A. Becquerel, the pathbreaker of a radio-activity: $n_{1}{ }^{\mathrm{N}}-n_{1} \vdots 13 * 13$.

Opening of a radio-activity: $\mathrm{Y}-\mathrm{Y}_{1}{ }^{\mathrm{N}}: 13 * 13$.
E. Reserford, the pathbreaker of a atomic nucleus: $N_{1}{ }^{*}-N_{1}{ }^{\mathrm{N}}-2 \vdots 13^{*} 13^{*} 1321$.
$F$. Shtrassman, the pathbreaker of reaction of division of nucleus of uranium:

$$
N_{1}{ }^{*}-N_{2}{ }^{\mathrm{N}}-1 \vdots \underline{13 *}{ }^{*} 13^{*} 1321 .
$$

Discovery of reaction of division of nucleus of uranium 17.12.1938: $n-n_{1}{ }^{\mathrm{N}}-2 \vdots 13 * 13$.

Article about Discovery is dated 22.12.1938: $N-N_{1}{ }^{\mathrm{N}}: 667$.
The message on Discovery (6.01.1939): $N-N_{2}{ }^{\mathrm{N}}: 13 * 13139$.
From among pathbreakers coincidence for dates is absent only at O.Hahn.
V. Heisenberg, the well-known physicist, the head of the first nuclear program of Germany:
$N_{1}{ }^{*}-N_{2}{ }^{\mathrm{N}}-1 \vdots 667$.
1.6. Nuclear themes and programs of the countries of the world

Leading nuclear powers are the USA, Russia, Chinese People's Republic, the Great Britain, France, India, Pakistan.

Nuclear theme of the USSR. The first atomic power station has been constructed in USSR where also there was a failure of the atomic power station largest in a history.
I.V. Kurchatov (12.01.1903-7.02.1960), one of founders of atomic engineering:

$$
N_{1}-N_{2}{ }^{\mathrm{N}} \vdots \frac{13^{*} 13^{*} 13 ; n_{1}^{\mathrm{N}}-n_{1}+1 \vdots 13^{*} 13 ;\left(N_{\mathrm{CH}}-N_{1} \vdots 13^{*} 13 ; N_{\mathrm{H}}-N_{1}+1 \vdots 13 * 13,\right.}{\left.n_{\mathrm{CH}}-n_{1} \vdots 13, n_{\mathrm{CH}}-n_{2} \vdots 13, \mathrm{Y}_{\mathrm{CH}}-\mathrm{Y}_{2} \vdots 13\right) .}
$$

The first-ever atomic power station (27.06.1954-29.04.2002):

$$
N_{1}{ }^{*}-N_{1}{ }^{\mathrm{N}}-2 \vdots 13 * 13, n_{1}{ }^{\mathrm{N}}-n_{1}-2 \vdots 13 * 13 ; N_{2}-N_{2}{ }^{\mathrm{N}}+1 \vdots 667 .
$$

N.A. Dollezhal (15 (27) .10.1899-21.11.2000), the main designer of the first atomic power station: $N_{1}{ }^{*}-N_{2}{ }^{\mathrm{N}}+2 \vdots 13 * 13$.
N.V. Timofeev-Resovsky, the founder of radiobiology, studied influence of radiations in area

A.D. Saharov, the founder of a first-ever H-bomb: $n_{1}{ }^{\mathrm{N}}-n_{2}-1 \vdots 13 * 13$.

The first thermonuclear bomb (test): $N^{*}-N_{1}{ }^{\mathrm{N}}+2 \vdots 667$.
The order to create the soviet A-bomb has given I.V.Stalin: $N_{1}-N_{2}{ }^{\mathrm{N}}+2 \vdots 667$.
The nuclear program of USSR was supervised by L.P.Berija: $N_{2}-N_{1}{ }^{\mathrm{N}}+2 \vdots 13 * 13$.
The first in USSR the nuclear reactor is started 25.12.1946: $N-N_{2}{ }^{\mathrm{N}}+2 \vdots 13 * 13$.
The industrial nuclear reactor first in the USSR, physical start-up 08.06.1948, an output on a designed capacity $19.06 .1948: n_{2}{ }^{\mathrm{N}}-n_{1}-1 \vdots 13^{*} 13, N_{2}{ }^{*}-N_{1}{ }^{\mathrm{N}}: 13^{*} 13$.

Start-up of a reactor by the first nuclear submarine the USSR (4.07.1958):
$N-N_{2}{ }^{\mathrm{N}}-2 \vdots 667$.
The Great Britain. Official start-up of the first-ever industrial (commercial) atomic power station was in Colder-hall 17.10.1956: $N^{*}-N_{1}{ }^{\mathrm{N}}=13 * 13 * 13 * 31, N-N_{1}{ }^{\mathrm{N}}: 13 * 13478$.

France. Start-up of a reactor of the first atomic power station 28.09.1956:

$$
N^{*}-N_{2}{ }^{\mathrm{N}}-1 \vdots 13^{*} 13 .
$$

The nuclear program of India

H.D. Bhabha, the head of the nuclear program: $N_{2}-N_{2}{ }^{\mathrm{N}} \vdots 13 * 13329$.

First atomic power station "Tarapur- 1 " 01.04.1969: $N-N_{1}{ }^{\mathrm{N}}+1 \vdots 13 * 13$.
The nuclear program of Chinese People's Republic
Test of the first A-bomb (16.10.1964): coincidences are not present.
First atomic power station "Zinshan", connection to a network 15.12.1991:

$$
\begin{gathered}
n-n_{1}{ }^{\mathrm{N}} \vdots 13 * 13, N^{*}-N_{1}{ }^{\mathrm{N}}+2 \vdots 13^{*} 13 . \\
\text { The nuclear program of Pakistan }
\end{gathered}
$$

The beginning of the program (24.01.1972): $N^{*}-N_{1}{ }^{N}: 13^{*} 13 \vdots 13 * 13585$.
Test of the first thermonuclear bomb (28.05.1998): $N-N_{1}{ }^{\mathrm{N}}-1 \vdots 13 * 13$.
1.7. Chemical war and accidents. F.Haber (9.12.1868-29.01.1934) has suggested to apply poison gases in the form of a gas cloud: $N_{2}-N_{1}{ }^{N}+3=13 * 13 * 1366^{*} 1^{*} 3$.
N.D. Zelinsky ( 25.01 (6.02).1861-31.07.1953), the inventor of the filtering gas mask accepted on arms of Russia and the countries of the Europe: $N_{2}-N_{1}{ }^{N}+1 \vdots 667$.

The first application of the chemical weapon 22.04.1915: $N^{*}-N_{1}{ }^{N} \vdots 667$.
The technogenic accident largest on a death toll (3.12.1984) at the chemical enterprise in a Bhopal, has died nearby 18000 mans: $N-N_{2}{ }^{\mathrm{N}}+2 \vdots 13^{*} 13$.
1.8. Military accidents. A.B.Nobel (21.10.1833-10.12.1896), the famous inventor of dynamite: $Y_{2}-Y_{1}{ }^{N} \vdots 13^{*} 13$.

The Most destructive is application of usual explosives at aviation bombardments.
The statistics of chronology of the most known bombardments
Bombardment of Pearl Harbour 7.12.1941, as a result of which Japanese aircraft practically has been destroyed Pacific fleet of the USA: $N^{*}-N_{2}^{N}: 13^{*} 13$.

Bombardments of Tokyo by aircraft of the USA (was lost nearby 100000 mans): the first bombardment 24.11.1944: $n-n_{2}{ }^{\mathrm{N}}+1=13^{*} 13$.

The strongest in history (on a death toll) bombardment 10.03.1945:
$N-N_{1}{ }^{\mathrm{N}}+1=13 * 13 * 1374 * 1 * 3$.
(Subject matters of nuclear bombardments have been discussed above).
Bombardments of Pyongyang (Korea) 29.06.1950: $n_{1}{ }^{\mathrm{N}}-n=13^{*} 13$.
One of the most intensive bombardments 20.09.1950: $N^{*}-N_{2}{ }^{N}+2 \vdots 13 * 13 * 1356$.
Bombardments of Hanoi (Vietnam) 29.06.1966 (about 400000 victims): $n_{1}{ }^{\mathrm{N}}-n=13 * 13$.

## 2. Chronological data of the largest social conflicts

2.1. Subject matter of the accidents connected with the international terrorism

Attack of terrorists to New York and Washington 11.09.2001: $N^{*}-N_{2}{ }^{N}-1 \vdots 13 * 13579$.
Osama bin Laden (was born 28.06.1957 [5]), the terrorist №1, the leader of organization "AlKaida" accused of this largest act of terrorism: $n_{1}{ }^{\mathrm{N}}-n-1 \vdots 13^{*} 13$.

Muammar Caddafi (7.06.1940-20.10.2011), the head of Libya accused of support of terrorism: $N_{2}{ }^{*}-N_{2}{ }^{\mathrm{H}} \vdots 13 * 13, n_{2}{ }^{\mathrm{H}}-n_{1}-2 \vdots 13^{*} 13$.
T. Macway (23.04.1968-11.06.2001), the organizer of the second terrorist attack on scale in the USA: $N_{1}{ }^{*}-N_{2}{ }^{\mathrm{N}}-1 \vdots 13^{*} 13, n_{2}-n_{2}{ }^{\mathrm{N}}-2 \vdots 13^{*} 13$.
L.H. Oswald (18.10.1939-24.11.1963) accused of murder of president of the United States John Kennedi: $n_{2}-n_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$.
S. Sirhan (was born 19.03.1944) accused of murder of the candidate for president of the United States Robert Kennedi: $N-N_{2}{ }^{\mathrm{N}}-1 \vdots 13 * 13$.

Jasir Arafat ( 04.08 .1929 - 11.11.2004), Palestinian's leader, the accused USA in the international terrorism: $N_{2}{ }^{*}-N_{2}{ }^{\mathrm{N}}-1=\underline{13 * 13 * 1395 *} 1^{*} 3, \mathrm{Y}_{1}-\mathrm{Y}_{2}{ }^{\mathrm{N}}-2 \vdots 13 * 13$.

Hasan-al-Banna (14.10.1906-12.02.1949), the founder of the largest religious-political organization "Brothers-moslems", concerning to the category terrorist: $N_{1}-N_{1}{ }^{N}+1 \vdots 13^{*} 13$.

The organization is created in 1928: $\mathrm{Y}-\mathrm{Y}_{2}{ }^{\mathrm{N}}-1 \vdots 13^{*} 13$.
M.A. Agdzha (was born 9.01.1958) has made attempt at Pope John Paul II: $n_{1}{ }^{N}-n-2$ ! 13*13.
G. Printsip (25.07.1894-28.04.1918) has killed Austrian monarch and has led to the first world war: $N_{2}-N_{2}{ }^{\mathrm{N}}+1 \vdots 667, \mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}}+2 \vdots 13 * 13$.

Murder is carried out 28.06.1914: $n_{1}{ }^{\mathrm{N}}-n-1 \vdots 13^{*} 13$.
Murderers of Russian tsar Alexander I/ were killed 15.04.1881:
$N_{2}-N_{2}{ }^{\mathrm{N}}-1 \vdots 13^{*} 13^{*} 1306$.
B.V. Savinkov, the famous revolutionary-terrorist: $\mathrm{Y}_{2}-\mathrm{Y}_{2}{ }^{\mathrm{N}}+2 \vdots 13 * 13$.
2.2. The most significant religious wars and persons

Fridrih II Staufen, emperor of Sacred Roman empire, is declared by the antiChrist daddy Grigory IX [4, 5]: $\mathrm{Y}_{2}-\mathrm{Y}_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13, n_{2}{ }^{\mathrm{N}}-n_{2}-2 \vdots 13^{*} 13$.

Henry IV, emperor of Sacred Roman empire, waged greater war against the Roman church:
$Y_{1}-Y_{1}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$.
War with moslems for deliverance of Christ's coffin
Prophet Mohammed (nearly 570-8.06.632), the founder of an islam and Arabian State, which have won the christianity relic: $n_{2}{ }^{\mathrm{N}}-n_{2}-1 \vdots 13 * 13$.

Albigoiwars. Reimond VI (27.10.1156-2.08.1222), columns Toulouse, the central figure of the given wars: $N_{1}-N_{2}{ }^{N} \vdots 667, \mathrm{Y}_{2}-\mathrm{Y}_{1}{ }^{\mathrm{N}}-2 \vdots 13^{*} 13$.

War with huguenots. Henry IV Navarsky (13.12.1553-14.05.1610), king of France, waged war with Christians-Catholics: $n_{1}{ }^{\text {N }}-n_{1}-2 \vdots 13^{*} 13$.
2.3. Founder of Reformation of church Jan Gus, is condemned as the heretic and burnt:
$Y_{1}-Y_{1}{ }^{N}+1 \vdots 667, Y_{2}-Y_{1}{ }^{\mathrm{N}} \vdots 13, N_{2}-N_{1}{ }^{\mathrm{N}} \vdots 13$.
2.4. Great French revolution

Coincidences for dates of all famous leaders of revolution take place.
M. Robesper: $Y_{1}-Y_{2}{ }^{N} \vdots 13^{*} 13$. Z.P.Marat: $N_{1}-N_{2}{ }^{N}+3 \vdots 13^{*} 13$.
Z.Z. Danton: $Y_{1}-Y_{2}{ }^{N}-1 \vdots 13 * 13$. Z.P.Brisso: $N_{1}-N_{2}{ }^{N}+1 \vdots 13 * 13, N_{2}-N_{2}{ }^{N}+1 \vdots 13 * 13$.
Z. Lafajet: $\mathrm{Y}_{1}-\mathrm{Y}_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$. Z.R.Eber: $\mathrm{Y}_{1}-\mathrm{Y}_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$.

Jacobiner's carried out terror and pursued a policy against Christian [5].
2.5. Great English revolution
O. Kromvel, the leader of revolution: $N_{1}{ }^{*}-N_{1}{ }^{N}-1 \vdots 667$.

He has passed in a society as murder of king and the dictator [4,5].
2.6. Overthrow of imperial authority in China

Sun Jat Sen (12.11.1866-12.03.1925), the ideologist and the organizer of the Society of revival of China - Gomindan (24.11.1894):
$Y_{2}-Y_{2}{ }^{\mathrm{N}}+2 \vdots 13^{*} 13 ; n-n_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13, \mathrm{Y}-\mathrm{Y}_{1}{ }^{\mathrm{N}}+2 \vdots 13^{*} 13$.
2.7. Overthrow of a monarchy in Russia
A.F. Kerensky (22.04 (4.05).1881-11.06.1970), minister-chairman of Provisional government in 1917: $N_{1}-N_{1}{ }^{\mathrm{N}}-1 \vdots 13^{*} 13^{*} 1328, n_{2}-n_{2}{ }^{\mathrm{N}}-2 \vdots 13 * 13$.
2.8. Representatives of antireligious philosophy
D. Didro, the great French philosopher, acted with criticism of Christian religion and church:
$N_{2}-N_{2}{ }^{N} \vdots 13 * 13$.
L. Feierbah, the founder of a philosophical source of marxism: $N_{2}{ }^{*}-N_{2}{ }^{N}+1 \vdots 667$.
I. Dizgen, the known materialist-atheist and marxist:

$$
N_{2}-N_{1}^{\mathrm{N}}-2=\underline{13 * 13 * 1333 * 1 * 3, n_{2}-n_{2}^{\mathrm{N}}=13 * 13 . ~}
$$

An atheistic society of Communist Russia is created in 1925: $Y-Y_{2}{ }^{N}+2 \vdots 13 * 13$.
E.M. Jaroslavsky, permanent chairman of this union: $N_{2}{ }^{*}-N_{2}{ }^{N}+1 \vdots \underline{13 * 667}$.
2.9. Properties of dates of communist figures

The Communism has proved as the most consecutive opponent of church. The huge damage has been put to church by a Stalin's regime. Dates of the dictator and the chapter of retaliatory bodies are connected with Neron's dates: I.V. Stalin: $N_{1}-N_{2}{ }^{N}+2 \vdots 667$. L. Berija: $N_{2}-N_{1}{ }^{N}+2 \vdots 13^{*} 13$.

Theorists of communism:
K. Marx: $\mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}}=13^{*} 137\left(N_{2}-N_{1}{ }^{\mathrm{N}}-3 \vdots 13^{*} 13\right)$. F.Engels: $\mathrm{Y}_{2}-\mathrm{Y}_{1}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$.

The largest figures of the international communism
China: Mao Zedong: $N_{2}{ }^{*}-N_{1}{ }^{N} \vdots 13 * 13$.

Lee Da Jao, the first propagandist of marxism: $\mathrm{Y}_{2}-\mathrm{Y}_{2}{ }^{\mathrm{N}}: 13^{*} 13$.
Korea. Kim Ir Sen: $N_{1}-N_{2}{ }^{N}-1 \vdots 13^{*} 13$. Japan. S.Katajama: $N_{1}{ }^{*}-N_{2}{ }^{N} \vdots 667$.
Philippines. K.Evanhelista, dates are unknown: $\mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}} \vdots 13$.
M. Balgos: $N_{2}{ }^{*}-N_{2}{ }^{N}+1 \vdots 667, Y_{1}-Y_{1}{ }^{N}-2 \vdots 13 * 13 ;\left(N_{2}{ }^{*}-N_{2}{ }^{N}+3 \vdots 13^{*} 13^{*} 1359\right)$.

Kampuchea. Pol Pot: $Y_{1}-Y_{2}{ }^{N}-1 \vdots 13 * 13$.
Cuba. F. Kastro: $Y-Y_{2}{ }^{N} \vdots 13 * 13, N-N_{1}{ }^{N}-2 \vdots 13^{*} 13$. H.Marti: $Y_{2}-Y_{1}{ }^{N}+1 \vdots 13 * 13$.
K. Balino: $Y_{2}-Y_{2}{ }^{N}+1 \vdots 13^{*}$ 13. Che Guevara: $Y_{1}-Y_{2}{ }^{N}-1 \vdots 13^{*} 13$.

Africa. P. Lumumba: $Y_{1}-Y_{2}{ }^{N}+2 \vdots 13^{*} 13$.
India. A.K. Ghosh: $N_{1}{ }^{*}-N_{1}{ }^{N}-1 \vdots 13 * 13^{*} 1348, n_{1}{ }^{N}-n_{2}+2 \vdots 13^{*} 13$.
Germany. A. Bebel: $N_{1}{ }^{*}-N_{2}{ }^{N}-2 \vdots 13 * 13$. O.Grotevol: $Y_{1}-Y_{1}{ }^{N}+2 \vdots 13 * 13$.
K. Libkneht, V. Pik: coincidences are not present.

Italy. A. Gramshi: $N_{1}-N_{2}{ }^{N}-2 \vdots 13^{*} 13^{*} 1335^{*} 1^{*} 3, N_{2}-N_{1}^{N}+2 \vdots 13^{*} 13$.
France. G. Babef: $n_{1}-n_{2}{ }^{N}+2 \vdots 133^{*} 13$. Z.Ged: $N_{2}{ }^{*}-N_{1}{ }^{N}+1 \vdots 667$.
P. Lafarg: $N_{1}{ }^{*}-N_{1}{ }^{N}+1 \vdots 13^{*} 13, n_{2}-n_{2}{ }^{N} \vdots 13^{*} 13$. M. Kashen: $N_{1}-N_{2}{ }^{N}-1 \vdots 13^{*} 13$.
P. Vajan-Cuturje: $N_{1}{ }^{*}-N_{1}{ }^{N}-2 \vdots 13^{*} 13, N_{2}{ }^{*}-N_{2}{ }^{N}-2 \vdots 13 * 13$.

Lui-Oskar Frossar: $N_{2}-N_{1}{ }^{\mathrm{N}}+1 \vdots 13^{*}$ 13. Z.Djuklo: $Y_{1}-Y_{1}{ }^{\mathrm{N}} \vdots 13 * 13$.
Spain. D. Ibarruri: $Y_{1}-Y_{1}{ }^{N}+1 \vdots 13^{*} 13$. H.Dias: $Y_{1}-Y_{1}{ }^{N}+1 \vdots 13^{*} 13$.
Yugoslavia. Bros Tito: $N_{2}{ }^{*}-N_{2}{ }^{N}-1 \vdots 13 * 13 ;\left(N_{1}-N_{2}{ }^{\mathrm{N}}-3 \vdots\right.$ 13*13*1314).
Czechoslovakia. L. Zapototsky: $n_{1}-n_{1}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13, n_{2}-n_{1}{ }^{\mathrm{N}}-1 \vdots 13 * 13$.
K. Gotwald: $Y_{1}-Y_{1}{ }^{N}: 13^{*} 13, n_{1}-n_{2}{ }^{N}+2 \vdots 13 * 13$. A.Novotny: $N_{1}-N_{1}{ }^{N}-2 \vdots$ 13*13*1345.
L. Svoboda: $n_{1}-n_{2}^{N} \vdots 13 * 13, Y_{1}-Y_{1}{ }^{N}+1 \vdots 13 * 13$. G.Gusak: $n_{1}-n_{1}{ }^{N}-1 \vdots 13^{*} 13$.

Poland. M. Novotko: $N_{2}{ }^{*}-N_{1}{ }^{N}+2 \vdots 13 * 13$. A.Varsky, F.Gzhelshchak: no.
The USA. J. Reed: $N_{2}-N_{2}{ }^{N}-1 \vdots 13 * 13011$. C.Rutenberg: $Y_{2}-Y_{2}{ }^{N}: 13 * 13$.
F. Sorge: $N_{1}{ }^{*}-N_{1}{ }^{N}+2 \vdots 13^{*} 13$. Austria. I.Koplenig: $n_{1}{ }^{N}-n_{2}-2 \vdots 13^{*} 13$.

Portugal. B. Gonsalvish: $N_{1}-N_{1}^{N}-2 \vdots 13^{*} 13^{*} 1343$.
Greece. A. Grozos: $N_{1}-N_{1}{ }^{N}-1 \vdots 13^{*} 13^{*} 1336$. Turkey. M.Subhi: $N_{2}-N_{2}{ }^{N} \vdots 13 * 13$.
2.10. The Russian revolution and the USSR

The Largest ideologists of Left-wing radical populism:
M.A. Bakunin, the figure of anarchism: $n_{2}-n_{1}{ }^{\mathrm{N}}+2 \vdots 13 * 13$.
P.A. Kropotkin, the figure of anarchism: $N_{1}-N_{1}{ }^{N}-1 \vdots 13^{*} 13, N_{2}{ }^{*}-N_{2}{ }^{N}+2 \vdots 13 * 13$.
P.L. Lavrov, a revolutionary populist: $N_{1}-N_{2}{ }^{N}-1 \vdots 13 * 13, N_{2}{ }^{*}-N_{2}{ }^{N} \vdots 667$.
P.N. Tkachev, a populist-conspirator: $N_{1}-N_{1}{ }^{N}+2 \vdots 667$.

After October revolution the church has declared as AntiChrist leaders of the communists [4,
5]. 5.12.1917 - the establishment of revolutionary tribunals: $N^{*}-N_{1}^{N}: 13^{*} 13$.
2.11. Heads of the agencies of state security
F.E. Dzerzhinsky (1917-26): $\mathrm{Y}_{2}-\mathrm{Y}_{2}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$.
V.R. Menzhinsky (1926-34): $N_{2}{ }^{*}-N_{2}{ }^{N}-1 \vdots 13 * 13106$.
G.G. Jagoda (1934-36): $N_{2}-N_{2}{ }^{N}-2=13^{*} 13^{*} 1347^{*} 1^{*} 3$.
N.I. Ezhov (1937-39): $\mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13$. L.Berija (1940-52): $N_{2}-N_{1}{ }^{N}+2 \vdots 13 * 13$.
A.J. Vyshinsky, the main ruthless public prosecutor of times of Stalin reprisals:

$$
N_{2}^{*}-N_{2}^{\mathrm{N}}-1=13 * 13 * 1359 * 1 * 3 .
$$

The basis and heads of communist party of Russia
1-st congress Communist Party 1(13).03.1898: $Y-Y_{1}{ }^{N}-2 \vdots 13 * 13$.
I.V. Stalin: $N_{1}-N_{2}{ }^{N}+2 \vdots 667$. V.I.Lenin: $Y_{2}-Y_{2}{ }^{N}+3 \vdots 13^{*} 13$.
N.S. Hrushchev: $N_{1}-N_{1}{ }^{N}+1=13^{*} 13^{*} 1003^{*}(1+3), Y_{1}-Y_{1}{ }^{N}+2: 13^{*} 13$.
L.I. Brezhnev: $N_{1}-N_{1}{ }^{N}: 13^{*} 13128$. J.V.Andropov: $N_{2}{ }^{*}-N_{2}{ }^{N}-2 \vdots 667$.
M.S. Gorbachev: $N-N_{1}{ }^{N}+1 \vdots 13^{*} 13298$. G.A.Sjuganov: $N^{*}-N_{1}{ }^{N}+1 \vdots 667$.
2.12. A Stalin management - the organizer of political reprisals
A.S. Enukidze: $N_{2}{ }^{*}-N_{1}{ }^{N}-2 \vdots 13 * 13$. A.I.Mikojan: $n_{1}-n_{2}{ }^{N} \vdots 13 * 13, Y_{1}-Y_{1}{ }^{N}+1 \vdots 13 * 13$.
N.A. Bulganin: $\mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}}+1 \vdots 13^{*} 13, n_{1}-n_{2}{ }^{\mathrm{N}}-2 \vdots 13^{*} 13$.
A.A. Zhdanov: $Y_{1}-Y_{1}{ }^{N} \vdots 13 * 13$. S.V.Kosior: $N_{2}{ }^{*}-N_{2}{ }^{N}+1 \vdots 13^{*} 13$.
V.M. Molotov: $N_{2}-N_{2}{ }^{N}-1 \vdots 13 * 13475$.

Known pact Molotov and A.Hitler 23.08.1939: $N-N_{1}{ }^{N}-1 \vdots$ 13*13*1370.
A.A. Andreev: $Y_{1}-Y_{1}{ }^{N}+1 \vdots 13^{*}$ 13. G.M.Malenkov: $N_{1}{ }^{*}-N_{1}{ }^{N}-1: 13 * 13093$.
M.I. Kalinin: $\mathrm{N}_{2}-\mathrm{N}_{2}{ }^{\mathrm{N}}-1 \vdots 13 * 13191$.
2.13. The military management of the USSR

The Warsaw Treaty Organization is created 14.05.1955: $N-N_{1}{ }^{N}+2: 13^{*} 13$;
has stopped existence 1.07.1991: $N^{*}-N_{1}{ }^{N}: 13^{*} 13, n_{1}{ }^{N}-n+2 \vdots 13^{*} 13$.
I.S. Konev is the first commander-in-chief:?
$Y_{1}-Y_{1}{ }^{N}-1 \vdots 13 * 13, N_{1}-N_{1}{ }^{N}+2 \vdots 13 * 13 * 1340$.
Stalin's marshals of the USSR
M.V. Frunze: $\mathrm{Y}_{2}-\mathrm{Y}_{2}{ }^{\mathrm{N}}+2 \vdots 13^{*}$ 13. S.M.Budenny: $N_{2}-N_{2}{ }^{N}+2 \vdots 13^{*} 13$.
M.N. Tuhachevsky: $n_{2}-n_{2}{ }^{N}-2 \vdots 13^{*} 13$. V.K.Bljuher: $N_{2}-N_{1}{ }^{N}: 13^{*} 13352$.
G.K. Zhukov: $Y_{1}-Y_{1}{ }^{N}: 13^{*} 13$. K.K.Rokosovsky: $Y_{1}-Y_{1}{ }^{N}: 13 * 13, N_{1}-N_{1}{ }^{N}: 667$.
R.J. Malinovsky: $Y_{1}-Y_{1}{ }^{N}-2 \vdots 13^{*} 13, n_{1}-n_{2}{ }^{N}+2 \vdots 13^{*} 13$.
B.M. Shaposhnikov: $N_{2}{ }^{*}-N_{1}{ }^{N}-2=13^{*} 13^{*} 1374^{*} 1^{*} 3$.
S.K. Timoshenko: $Y_{1}-Y_{1}{ }^{N}+1 \vdots 13^{*} 13$. A.M.Vasilevsky: $Y_{1}-Y_{1}{ }^{N}+1 \vdots 13^{*} 13$.
K.A. Meretskov: $\mathrm{Y}_{1}-\mathrm{Y}_{1}{ }^{\mathrm{N}}-1 \vdots 13^{*} 13, n_{2}{ }^{\mathrm{N}}-n_{1}-2 \vdots 13^{*} 13$.
L.A. Govorov: $Y_{1}-Y_{1}{ }^{N}-1 \vdots 13^{*} 13$. F.I.Tolbuhin: $Y_{1}-Y_{1}{ }^{N}+2 \vdots 13^{*} 13, N_{2}{ }^{*}-N_{2}{ }^{N}+2 \vdots 13 * 13$.
V.D. Sokolovsky: $Y_{1}-Y_{1}{ }^{N}-1 \vdots 13^{*} 13, N_{2}{ }^{*}-N_{1}{ }^{N}+2 \vdots 13^{*} 13$.

There are no coincidences: K.E. Voroshilov, A.I. Egorov, G.I. Kulik.
Commanders-in-chief Navies
V.M. Orlov (1931-1937): $Y_{1}-Y_{1}{ }^{N}+1 \vdots 13^{*} 13$. M.V. Viktorov (1937-1938): $Y_{1}-Y_{1}{ }^{N}+2 \vdots 13 * 13$.
N.G. Kuznetsov (1939-1946, 1951-1956): $N_{2}-N_{2}{ }^{N}+2 \vdots 667$.
I.S. Jumashev (1947-1951): $Y_{1}-Y_{1}{ }^{N}+1 \vdots 13 * 13$.

Military command for the period of rebellion against M.S.Gorbachev
D.T. Jazov, Minister of Defence: $N-N_{2}{ }^{N}: 13^{*} 13$.
V.N. Chernavin, the commander-in-chief of the Navy (1985-92): $Y-Y_{2}{ }^{N}-1 \vdots 13 * 13$.

## 3. The probability's and statistical analysis of chronological anomaly

3.1. Calculation of probabilities of coincidences for one parameter

At calculation we assume, that dates of a life of people and events are casual and independent from each other. Accordingly random variables are parameters $X_{j}(j=1,2,3): \Delta N=\mid N-$ $N_{0}\left|, \Delta n=\left|n-n_{0}\right|, \Delta Y=\left|Y-Y_{0}\right|\right.$ (an index 0 corresponds to the "central" date). Event $A$ (coincidence) is the divisibility of value of parameter to considered code $C: A=X_{j} \vdots C$. Events $\Delta N \vdots C$, $\Delta n \vdots C, \Delta Y \vdots C$ are practically independent.

Probabilities and other characteristics of events of the given type were investigated on the COMPUTER by a method of direct estimate of possible versions. For values of codes of the order

100 it is established, that at calculation of probabilities of coincidences for set of investigated dates event's $\Delta N \vdots C, \Delta n \vdots C, \Delta Y \vdots C$ are practically independent. Correlation with event $\Delta Y \vdots C$ the least.

For pair parameters $\Delta \mathrm{N}$ and $\Delta \mathrm{n}$ there is very insignificant correlation (factor of correlation of the order 0,01 ), essentially not influencing on size of probabilities of set of coincidences. For great values of codes influence of correlations on total probabilities is much less.

Check of performance of property of frequency rate is maybe interpreted as test. By virtue of above noted property of independence of coincidences research of set of dates can be considered as sequence of independent tests (so-called diagram Bernulli) with binomial character of distribution of number of coincidences [6-9].

At division into number $C$ of the any random number $X$ in regular intervals distributed in an interval $[0, a]$ where $a \gg C$, the remainder of division in the equiprobable image can accept one of values $0,1, \ldots, C-1$. Consequently, the probability of event $A=X_{j} \vdots C$ is equal $1 / C$. This calculation is correct in relation to parameter $\Delta N$ (because of the assumption $a \gg C$ ).

However the analysis shows, that practically the same value of probability takes place for parameter $\Delta n$ [7]: $P\{A\}=1,028 / 169 \approx 1 / 169=1 / C$.

Calculation for parameter $\Delta \mathrm{Y}$ depends on size of a considered interval of time.
If the given interval (in terms of Y ) much more value of a code, that for practically important cases is usually carried out [7-9], calculation of probability for parameter $\Delta \mathrm{Y}$ the same, as for parameter $\Delta \mathrm{N}$.
3.2. Calculation of probabilities of coincidences for set of dates

For two Neron's dates and one investigated date is available 8 parameters $\Delta N_{i}, \Delta N_{i}^{*}, \Delta n_{i}, \Delta Y_{i}$, $i=1,2$. Check informative properties for of some numerical codes from which the cores are codes $13^{2}, 667$ is carried out. Greater codes of a type $13^{3}, 13^{*} 13^{*} 13 C_{1} C_{2} \ldots$, where $C_{1}, C_{2} \ldots$ - decimal figures are considered also.

For a code $13^{2}$ checks for 8 parameters (with probability of precise coincidence $p_{1}=1 / 169$ ), and for other codes - for 6 parameters $\Delta N_{i}, \Delta N_{i}^{*}, \Delta Y_{i}, i=1,2$ are carried out. The corresponding probability for a code 667 is equal $p_{2}=1 / 667$. For $m$ dates it is carried out $8 m$ checks for a code $13^{2}$.

The probability not less $k$ coincidences with a margin error no more $\varepsilon$ in the given set of checks is defined under the formula of binomial probabilities [6-9]:
$\mathrm{P}(8 m, k, p)=\mathrm{C}(8 m, k) p^{k} q^{8 m-k}+\ldots+\mathrm{C}(8 m, 8 m-1) p^{8 m-1} q+\mathrm{C}(8 m, 8 m) p^{8 m}$,
where $p=(2 \varepsilon+1) p_{1}, q=1-p$. For a code 667 it is carried out $6 m$ checks.
The corresponding probability is equal $\mathrm{P}(6 m, k, p)$, where $p=(2 \varepsilon+1) p_{2}$. As considered events practically are independent, the final probability is equal to $\mathrm{P}(8 m, k, p) \mathrm{P}(6 m, k, p)$.

Probabilities of coincidences at check of frequency rate of parameter for codes of a type $13^{3}$, $13 * 13 * 13 \mathrm{C}_{1} \mathrm{C}_{2} \ldots$ are accordingly equal: $1 / 2197 \ll 1$ and $1 / 780 \ll 1$.
3.3. Frequencies and probabilities of coincidences for various codes and theme's

There are 375 dates. Quantity of coincidences to various accuracy $\varepsilon: 13^{2}-42,13^{2}( \pm 1)-88$, $13^{2}( \pm 2)-75 ; 667-7,667( \pm 1)-13,667( \pm 2)-10$.

For a code $13^{2}$ anomaly takes place. Excess of frequency of coincidences $\tau$ in comparison with norm significantly is more than unit:
$13^{2}(\varepsilon=0)-\tau=42^{*} 169 / 375 / 8 \approx 2,4 ; 13^{2}(\varepsilon=1)-\tau=88^{*} 169 / 375 / 8 / 2 \approx 2,5 ;$
$13^{2}(\varepsilon=2)-\tau=75^{*} 169 / 375 / 8 / 2 \approx 2,1.13^{2}(\varepsilon \leq 1)-\tau=130^{*} 169 / 375 / 8 / 3 \approx 2,4 ;$
$13^{2}(\varepsilon \leq 2)-\tau=205^{*} 169 / 375 / 8 / 5 \approx 2,3$

Corresponding probabilities there is much less than 1 :
$\mathrm{P}(8 * 375,42, \mathrm{p}=1 / 169) \approx 6 * 10^{-7} \ll 1 ; \mathrm{P}(8 * 375,130, \mathrm{p}=3 / 169) \approx 2 * 10^{-19} \ll 1$;
$\mathrm{P}(8 * 375,205, \mathrm{p}=5 / 169) \approx 4 * 10^{-27} \ll 1$.
For a code 667 anomaly less expressed:
$667(\varepsilon \leq 1)-\tau=20^{*} 667 / 375 / 6 / 3 \approx 2,0 ; \mathrm{P}(6 * 375,20, \mathrm{p}=3 / 667) \approx 3 * 10^{-3}$.
$667(\varepsilon \leq 2)-\tau=30^{*} 667 / 375 / 6 / 5 \approx 1,8 ; \mathrm{P}(6 * 375,30, \mathrm{p}=5 / 667) \approx 2 * 10^{-3}$.
Final value of probability according to the formula item 3.2:
$P\left(8^{*} 375,205, p=5 / 169\right)^{*} P(6 * 375,30, p=5 / 667) \approx 4^{*} 10^{-27 *} 2 * 10^{-3} \approx 10^{-29} \ll 1$.
The given values of probability allow to assume with confidence, that considered coincidences are not casual. For comparison expediently to note, that in practice usually sufficient it is considered reliability 0,99 (probability of a mistake 0,01 ).
3.4. Probabilities of coincidences for the greatest codes

375 basic dates are considered. For codes of a type $13^{3}, 13^{*} 13^{*} 13 C_{1} C_{2} \ldots$ there are 8 precise coincidences, 19 coincidences with a margin error no more than 1 and 29 coincidences with a margin error no more than 2 . For considered codes for one investigated date and two "central" Neron's dates 4 checks informative properties (for 4 parameters $\Delta N_{i}, \Delta N_{i}^{*}, i=1,2$ ), consequently, all $4 * 375=1500$ checks are carried out.

Corresponding probabilities there is much less than 1 also are equal:
$P_{0}(1500 ; 8) \approx 5 * 10^{-3} ; P_{1}(1500 ; 19) \approx 5 * 10^{-4} ; \mathrm{P}_{2}(1500 ; 29) \approx 9 * 10^{-5}$.
Excess of frequency of coincidences in comparison with norm are significant:

$$
\begin{gathered}
\tau_{0}=8 /(1 / 2197+1 / 780) / 1 / 375 / 4 \approx 4,2 \gg 1 ; \tau_{1}=19 /(1 / 2197+1 / 780) / 3 / 375 / 4 \approx 3,3 \gg 1 \\
\tau_{2}=29 /(1 / 2197+1 / 780) / 5 / 375 / 4 \approx 3,0 \gg 1
\end{gathered}
$$

3.5. Frequencies and probabilities of coincidences for social theme

There are 240 dates. Quantity of coincidences to various accuracy $\varepsilon: 13^{2}-18,13^{2}( \pm 1)-56$, $13^{2}( \pm 2)-49 ; 667-4,667( \pm 1)-8,667( \pm 2)-3$.

Excess of frequency of coincidences for a code $13^{2}$ :
$13^{2}(\varepsilon=0)-\tau=18^{*} 169 / 240 / 8 \approx 1,6 ; 13^{2}(\varepsilon=1)-\tau=56 * 169 / 240 / 8 / 2 \approx 2,5 ;$
$13^{2}(\varepsilon=2)-\tau=49^{*} 169 / 240 / 8 / 2 \approx 2,2.13^{2}(\varepsilon \leq 1)-\tau=74 * 169 / 240 / 8 / 3 \approx 2,2 ;$
$13^{2}(\varepsilon \leq 2)-\tau=123 * 169 / 240 / 8 / 5 \approx 2,2$.
Corresponding probabilities there is much less than 1:
$\mathrm{P}(8 * 240,18, \mathrm{p}=1 / 169) \approx 4 * 10^{-2} ; \mathrm{P}(8 * 240,74, \mathrm{p}=3 / 169) \approx 10^{-9}$;
$\mathrm{P}(8 * 240,123, \mathrm{p}=5 / 169) \approx \underline{6 * 10^{-15} \ll 1}$.
3.6. Frequencies and probabilities for subject matter of accidents (events)

There are 51 dates. Quantity of coincidences to various accuracy $\varepsilon$ : $13^{2}-15,13^{2}( \pm 1)-16$, $13^{2}( \pm 2)-12 ; 667-2,667( \pm 1)-1,667( \pm 2)-3$.

Excess of frequency of coincidences for a code $13^{2}$ significantly is more than 1 :
$13^{2}(\varepsilon=0)-\tau=15^{*} 169 / 51 / 8 \approx 6,2 ; 13^{2}(\varepsilon=1)-\tau=16^{*} 169 / 51 / 8 / 2 \approx 3,3 ;$
$13^{2}(\varepsilon=2)-\tau=12 * 169 / 51 / 8 / 2 \approx 2,5.13^{2}(\varepsilon \leq 1)-\tau=31 * 169 / 51 / 8 / 3 \approx 4,3$;
$13^{2}(\varepsilon \leq 2)-\tau=43 * 169 / 51 / 8 / 5 \approx 3,6$.
Corresponding probabilities there is much less than 1 :

$$
\begin{aligned}
& \mathrm{P}(8 * 51,15, \mathrm{p}=1 / 169) \approx 4 * 10^{-8} \ll 1 \\
& \mathrm{P}(8 * 51,31, \mathrm{p}=3 / 169) \approx 3 * 10^{-11} \ll 1 ; \mathrm{P}(8 * 51,43, \mathrm{p}=5 / 169) \approx 10^{-12} \ll 1
\end{aligned}
$$

Anomaly for a code 667 :
$667(\varepsilon \leq 2)-\tau=6 * 667 / 51 / 6 / 5 \approx 2,6 ; P(6 * 51,6, p=5 / 667) \approx 3 * 10^{-2}$.
Final value of probability according to the formula item 3.2:
$\mathrm{P}(8 * 51,43, \mathrm{p}=5 / 169) * \mathrm{P}(6 * 51,6, \mathrm{p}=5 / 667) \approx 10^{-12} * 3 * 10^{-2} \approx \underline{10^{-14} \ll 1}$.
3.7 Final probabilities of coincidences for the greatest codes (event)

51 basic dates are considered. For codes of a type $13^{3}, 13^{*} 13^{*} 13 C_{1} C_{2} \ldots$ there are 4 precise coincidences, 6 coincidences with a margin error no more than 1 and 8 coincidences with a margin error no more than 2 . Corresponding probabilities there is much less than 1 also are equal:
$\mathrm{P}_{0}(204 ; 4) \approx 4 * 10^{-4} ; \mathrm{P}_{1}(204 ; 6) \approx 8 * 10^{-4} ; \mathrm{P}_{2}(204 ; 8) \approx 5 * 10^{-4}$.
Excess of frequency of coincidences in comparison with norm are significant:

$$
\begin{gathered}
\tau_{0}=4 /(1 / 2197+1 / 780) / 1 / 51 / 4 \approx 15,3 \gg 1 ; \tau_{1}=6 /(1 / 2197+1 / 780) / 3 / 51 / 4 \approx 7,6 \gg 1 \\
\tau_{2}=8 /(1 / 2197+1 / 780) / 5 / 51 / 4 \approx 6,1 \gg 1
\end{gathered}
$$

3.8. Frequencies and probabilities for theme of accidents (people)

There are 84 dates. Quantity of coincidences to various accuracy $\varepsilon: 13^{2}-9,13^{2}( \pm 1)-16$, $13^{2}( \pm 2)-14 ; 667-1,667( \pm 1)-4,667( \pm 2)-4$.

Excess of frequency of coincidences for a code $13^{2}$ :
$13^{2}(\varepsilon=0)-\tau=9 * 169 / 84 / 8 \approx 2,3 ; 13^{2}(\varepsilon=1)-\tau=16^{*} 169 / 84 / 8 / 2 \approx 2,0 ;$
$13^{2}(\varepsilon=2)-\tau=14 * 169 / 84 / 8 / 2 \approx 1,8 ; 13^{2}(\varepsilon \leq 1)-\tau=25^{*} 169 / 84 / 8 / 3 \approx 2,1$;
$13^{2}(\varepsilon \leq 2)-\tau=39^{*} 169 / 84 / 8 / 5 \approx 2,0$.
Corresponding probabilities there is much less than 1:
$\mathrm{P}(8 * 84,9, \mathrm{p}=1 / 169) \approx 2 * 10^{-2} \ll 1 ; \mathrm{P}(8 * 84,25, \mathrm{p}=3 / 169) \approx 6 * 10^{-4} \ll 1$;
$P(8 * 84,39, p=5 / 169) \approx 7 * 10^{-5} \ll 1$.
Anomaly for a code 667:
$667(\varepsilon \leq 2)-\tau=9 * 667 / 84 / 6 / 5 \approx 2,4 ; \mathrm{P}(6 * 84,9, p=5 / 667) \approx 10^{-2}$.
Final value of probability according to the formula item 3.2:
$P(8 * 84,39, p=5 / 169)^{*} P(6 * 84,9, p=5 / 667) \approx 10^{-4 *} 10^{-2} \approx 10^{-6} \ll 1$.
3.9. Final probabilities of coincidences for the greatest codes (people)

84 dates are considered. For codes of a type $13^{3}, 13^{*} 13^{*} 13 C_{1} C_{2} \ldots$ there are 4 precise coincidences, 6 coincidences with a margin error no more than 1 and 7 coincidences with a margin error no more than 2 . The probability has less than 1 :
$\mathrm{P}_{0}(336 ; 4) \approx 3 * 10^{-3} ; \mathrm{P}_{1}(336 ; 6) \approx 9 * 10^{-3} ; \mathrm{P}_{2}(336 ; 7) \approx 3 * 10^{-2}$.
Excess of frequency of coincidences in comparison with norm are significant:

$$
\begin{aligned}
\tau_{0}=4 /(1 / 2197+1 / 780) / 1 / 84 / 4 \approx 9,3 \gg 1 ; \tau_{1}=6 /(1 / 2197+1 / 780) / 3 / 84 / 4 \approx 4,6 \gg 1 . \\
\tau_{2}=7 /(1 / 2197+1 / 780) / 5 / 84 / 4 \approx 3,2 \gg 1 .
\end{aligned}
$$

The conclusion. All types of the most scale natural and technogenic accidents and social conflicts are considered. For the given subject matter existence of significant chronological anomaly is established. Remarkable property takes place: for priority persons and events coincidences are more informative (coincidences repeated, high accuracy).

There are especially remarkable fivefold coincidence for date of flash of well-known supernew star SN1054 and also repeated coincidences for a date started of a history of creation of the A-bomb.

The considered set of events, figures and their dates, is full and representative.
The probability of coincidences is very small (on many orders less accepted in a science and technics of critical values). Thus, it is possible to approve, that the described coincidences have natural character that is confirming of assumptions of founders of the cosmic theory V.I. Vernadsky, A.L. Chizhevsky and the founder of the mathematical theory of accidents R. Tom [1-5].

# Статистическое исследование хронологии крупнейших катастроф и социальных конфликтов 

## Сергей Александрович Некрасов

Южно-Российский государственный технический университет, Россия 346428, Новочеркасск, ул. Просвещения, 132.
Доктор технических наук, профессор
E-mail: Nekrasoff_Novoch@mail.ru
Аннотация: В статье рассмотрены основные виды крупномасштабных природных и техногенных катастроф, социальных конфликтов и потрясений. В результате статистического исследования обнаружена значительная хронологическая аномалия.

Ключевые слова: катастрофы; потрясения; конфликты; статистика; закономерность.
