Abstract. The species *Valeriana spryginii* P.A. Smirn. from European Russia is lectotypified.

Received for publication 05.05.2018

Genus *Valeriana* (*Valerianaceae*) comprises about 300 species distributed of Asia, Europe, North and South America (*see* www.efloras.org).

While studying the herbarium specimens of *Valeriana* housed at LE, came across some type specimens. After a detailed study of the specimens and scrutiny of the literature is was found that *Valeriana spryginii* P.A. Smirn. wattant lectotypification. Hence, lectotypes for the name are designated from the original materials in accordance with the Art. 7–10 of Shenzhen Code (Turland et al., 2018).

Valeriana spryginii P.A. Smirn. Mem. Mus. Etat Reg. Industr. Centr. 4: 7. 1927. – Lectotype (designated here by V. Vasjukov et I. Tatanov): [European Russia], Tambov region and distr., Yamskaya steppe near the settlement of Streletskaya, 23 May 1920, P. Smirnov (LE 01042396!; Fig. 1).

P.A. Smirnov (1927) described *V. spryginii* based on a collection made by Herbarium of Komarov Botanical Institute (St. Petersburg): “in steppis prov. Tambov, Penza, Woronesh (distr. Bobrow, Woronesh) et in Galitschja Gora prov. Orel, distr. Eletz”.

ACKNOWLEDGEMENTS

The authors thank N.N. Tzvelev for useful consultations, I.M. Kalinichenko, L.A. Novikova, N.S. Rakov, S.A. Senator – for their aid in the researches.

The work was carried out in the framework of the state task of the Institute of Ecology of the Volga river basin, project № 0128-2014-0002 «Assessment of modern biodiversity and forecast of its change for the Volga basin ecosystems under the conditions of their natural and anthropogenic transformation» (direction 52 «Biological diversity»).
