SPATIAL AND SECTORAL ANALYSIS OF THE DEVELOPMENT OF REAL SECTOR OF ECONOMY POTENTIAL REALIZATION

Nadiia Ya. YURKIV

Doctor of Science in Economic, Head of the Department of Bank Security Management, the University of Banking of the National Bank of Ukraine (Kyiv)

Summary. The potential of the real sector of economy of Ukraine is analyzed with the application of spatial and sectoral approaches. Comparative

advantages of Ukraine in foreign trade are estimated. Priority directions of stimulation of the real sector development in national economy are outlined.

Key words: *real sector of economy, potential, comparative advantages.*

Real sector of the economy is the complex multicomponent system with great amount of external and internal factors, which influence it, and also large collection of interrelations (inter-industry, multispectral, inter-regional, international etc.) both inside this system (on all its levels), and with the elements of higher levels. This peculiarities influence the characteristics of economic security of the above mentioned system. The research of its state, tendencies of growth, development of the strengthening policy needs complex approach on the basis of balanced infrastructure of the real sector of national economy with the integration in it all kinds of resources, systems of transportation, savings and regulation, tak-

ing into account the effects of agglomeration and clusterization. There exists necessity in analysis not only the characteristics of the state of basic types of economic activity development, but also in analysis of economic potential in regional and subregional aspects, including the three-dimensional interaction. This approach helps to reveal main regularities, interrelations and interdependences of sectors and segments of real economy in regional aspect, determine presence and effectiveness of material, financial, informational and organizational relations, which provide conditions of interactions between subjects of basic types of economic activity.
