FINANCIAL RESOURCES AND THEIR IMBALANCE TRAFFIC UNDER PREVALENCE OF THE FINANCIAL SECTOR OVER THE REAL

Maxim V. KORNEIEV

Candidate of Science in Economics, Associate Professor, Ukrainian Academy of Banking of the National Bank of Ukraine

Summary. In the article the features of financial resources and their motion in economy are certain. Principles of motion of financial resources in economy in the conditions of predominating of financial sector above the real are considered. From position

of approach of the systems investigational process of financialisation economy which stipulates the origin of disbalances of motion of financial resources. Certainly a role and task of policy is in the field of motion of financial resources in economy.

Key words: *financial resources, financial streams, movement, imbalances, financial sector, real sector, financialisation, economy.*

In the article has been certain the features of financial resources in the economy and their motion. Principles of motion of financial resources are considered in an economy in the conditions of predominating of her financial to the sector above the real. From position of approach of the systems the process of financialisation economy that stipulates the origin of disbalances of motion of financial resources is investigational. A role and task of policy are certain in the field of motion of financial resources in an economy.

The aim of the article is determination of essence, features of motion of financial resources in an economy in the context of predominating role her financial to the sector above the real. The classic economic model of circulation represents basic macroeconomic directions of motion of financial resources between her constituents (individual owners, financial market, commodity market, market of factors of production, firm). It is possible to represent directions of motion of financial resources an analogical method in an economy between the subjects of her financial and real sectors. Certainly, that functioning of such sectors (for example, in the context of activity them subject composition on absolutely all vital stag-

es) will be impossible in the modern terms of manage without financial resources. In theory, separate economic relations are characterized by motion of financial resources and embrace the row of operation. Balanced of financial resources in an economy it maybe to regulate by the use of the system of fundamental factors of influence on their motion. In a period transformation of motion of financial resources arise up and the disbalances (disproportions, disparities) conditioned exactly by the process of financialisation accumulate gradually. Approach of the systems to determination of essence of process of financialisation allows to define separate factors that stipulate appearance of transformations of financial resources in an economy (in the context of predominating of her financial to the sector above the real sector). In relation to development of questions of effective motion of financial resources in the economic systems it follows pay attention and to the aspects of financial policy in these directions of researches. Forming is on effective principles, mechanisms of policy in the field of motion of financial resources will provide foundation of stability of development of economy, will minimize the negative displays of process of financialisation economy.
