The status of health of the person represents dynamic balance with the parallel worlds: viruses, microbes, protozoa, animals, plants, world of moving natural objects and others.

At the same time the person radiates and is exposed itself to different types of radiations. The condition of an illness arises when this dynamic balance is broken, leading to functional and organic pathology, and at essential violations to death.

In the light of the knowledge accumulated by mankind it is necessary to open in the scattered mosaic of private pathologies a uniform basis – "a face of the opponent" its structure and functioning.

At the solution of this analyzed task our attention was drawn by viruses and insulin system.

Viruses - having the Russian name "poison" have been found in 1982 by D. I. Ivanovsky. Insulin has been discovered in 1921 by the Nobel laureate F. Banting and Ch. Best.

Influence of viruses on insulin system us has been revealed in 1982 when it has been proved that Diabetes of the I type causes "slow" (it is hidden flowing) a viral infection: there is without pain an autoimmune inflammatory process in Langergans's islands breaking production of insulin. (The replacing insulin therapy is appointed.) During 1 year from the demonstration of a disease (which is often proceeding with a coma) irreversible degenerate changes develop in B – cages. On the basis of this regularity has been offered by us rehabilitating insulinprodutsiruyushchy function B – cages therapy. Patents for the invention No. 2000782, No. 2391971.

Our supervision over the patients with a myocardial infarction, stroke (who don't have diabetes) have revealed that during the sharp period of a disease there is a hyperglycemia and a glyukozuriya, i.e. insulin neediness takes place.

The subsequent our supervision over the people who don't have diabetes have shown that insulin neediness is available also at other diseases. Atherosclerosis, coronary heart disease, thromboses, a thrombembolia, bronchial asthma, collagenases, cancer of various localization develop in conditions is hidden the proceeding insulin neediness. This Ex vantibus – positive medical effects of the therapy improving insulin security is confirmed.

(Invention of Ampere-second. SVN№ 1715356, Patents No. 1724245, No. 2008001, No. 2104000, No. 2031655, No. 2026050, No. 2391986)

Now it is considered (according to World Health Organization) that more than 5000 diseases are caused by genetic disorders. 5-8% of newborns are born with congenital defects. 40% of early child mortality and 50% of abortions have genetic pathology.

Hopes on prevention and treatment of congenital pathology assign to the expected results of genetic engineering.

However in the analysis of features of developing of congenital pathology pay attention the following facts capable to discover new idea of an etiopathogenesis of these diseases: at mothers of patients with diabetes children with various malformations are born in 10% of cases (cardiovascular system, a skeleton, neurologic violations), mortality of newborns in the first two days is high (at 8-18%). Genetic disorders are revealed at patients with diabetes of the I type – the disease caused by viruses. Congenital uglinesses and diabetes of the I type after the postponed flu, measles, a rubella, an epidparotit are frequent.

These data demonstrate that genetic violation leading to congenital pathology aren't primary in an etiopathogenesis, and are secondary – as a result the impact of a "slow" viral infection on V-cages of islands of Langergans breaking insulin security and as a result a genome.

The viral infection is transmitted to the subsequent generation, promoting congenital pathology. This regularity revealed by us allows to carry out, at the planned pregnancy, the therapy preventing congenital pathology - the insulin security destroying viruses and restoring, to keep the child's genome.

Evolution of the person goes on the way of development of intelligence. One of the serious illness proceeding with splitting of consciousness is schizophrenia. The disease arises at young gifted people with the developed brain very tectonics calculated on big intellectual loadings during active mastering knowledge and growth of a body. Etiopathogenesis diseases connect with genetic disorders. In 1932 therapy of schizophrenia is created by insulin shock. The essence of treatment consists in application of high doses of insulin at which peak of action glucose is entered and sugar is given inside. Remission of a disease develops at disease duration till 1 year from demonstration.

Consider that the shock caused by a hypoglycemia treats. A role of a slow viral infection in Langergans's islands and the insulin neediness caused by her in an etiopathogenesis of a disease aren't considered.

The brain at the capacity of 2% from body weight consumes 20% of oxygen and considerable part of food. At intellectual loading, a stress – consumption increases. Carrying out oxygen and food in a brain is carried out through a hematoencephalic barrier by insulin. This hormone for a brain carries out as if a role of the "pump" supporting his food and functioning. According to our analysis of information, the viral infection, as well as at diabetes of the I type, causes in patients with schizophrenia autoimmune without pain inflammatory process in B-cages of islands of Langergans with switching off of insulin produce function less than 70% of B-cages with decrease in an insulin retseptions. (At defeat more than 70-80% of B-cages diabetes of the I type quite often with a coma develops).

At schizophrenia during 1 year from demonstration of a disease irreversible degenerate changes in a cerebral cortex and B-cages develop. Insulin shock doesn't become effective. The genetic disorders revealed at schizophrenia – have secondary character – as a result of impact of a viral infection on B-cages and insulin neediness.

In the last 10 years autism has increased in the USA by 10 times. This disease children of intellectuals – employees of "Silicon Valleys", i.e. children the very tectonics of a brain calculated on the high intellectual loadings and decisions and, in this regard, the increased need of a brain for a oxygen supply and respectively in adequate insulin security of an organism which have inherited from the parents have mainly. Growth of incidence of children of intellectuals testifies to infectious – the virus prime cause of a disease weakening insulin security and functioning of a brain.

At patients with Alzheimer's disease, at short terms of a disease, optimization of insulin security of a biguanids gives the effect rehabilitating thinking.

Besides diabetes of the I type and schizophrenia defeat by a viral infection of B-cages of islands of Langergans in smaller what 70% of their volume are widespread more widely what frequent stay in V-cells of a viral infection testifies to (to 50 types). It promotes weakening of insulin system and decrease in a oxygen supply of a brain at a general population and as a result to decrease in congenital sharpness of quality of thinking, adequacy of the made decisions, especially in an assessment of the multiple-factor, fast-proceeding processes. Only 4% of people are capable to make adequate decisions in extreme situations. Entropy influence of viruses weakens insulin system and indirectly functioning of a brain and sharpness of thinking.

The sun makes active a viral infection, on our supervision, during the next periods: 1,5 weeks to and 1,5 months after a vernal and autumn equinox, and also a summer and winter solstice. During these periods most often there is a conception of children to congenital pathology. During the same periods most often there are wars, plane crashes, revolts, duels, other inadequate actions. The person to become as if "puppet" of virus system.

Actual problem of modern medicine are HIV – an infection, AIDS, hepatitis C, Fever Ebola, Koronaravirus MERS. The cancer cases, sarcoma, a leukosis accrue. The probability of emergence of new viral diseases is high. The mutation of viruses doesn't allow to receive vaccines in due time. New approach to fight against a viral infection on the basis of a number of regularities peculiar to virus system is necessary.

Viruses (poison) – possess qualities of biological toxin.

Viral diseases are private manifestation of life of uniform virus system.

The virus system has it inherent algorithm impact on the person (and an animal): viruses interfere in B-cages of islands of Langergans, the genome, a oxygen supply of fabrics break production of insulin and an insulinretseption and indirectly a carbohydrate, proteinaceous, fatty, mineral exchange, a rheology of blood, a lymph, a likvor, bile, immunity, and first of all a brain at the same time quality of thinking decreases. Thus, the virus system at a minimum of the effort reaches a maximum of entropy effect on an organism. In the subsequent viruses extend in other bodies and fabrics. Viruses are adapted to oxygen starvation.

Viruses exist only intracellularly - in cages "tanks" - conveyors (a look of plasmodium) which allow him to move and breed in an organism.

Viruses breaking immunity promote development of other types of infections.

The virus system carries out a specific goal-setting to interrupt human life, to breed in a corpse and with water to close the immortal circle of biological rotation in the nature.

The insulin supply neediness caused by viruses is widespread in an etiopathogenesis of modern diseases.

The revealed regularities inherent in virus system have allowed to create the new medicine unknown earlier destroying viruses, cells of cancer and sarcoma in any localization. The offered means consists of a siofor + delagit + acetilsalicylic acid (Patents for the invention No. 2391971, No. 2391972).

The effect is realized by destruction of cages - "tanks conveyors of viruses" (plasmodiums), restoration of insulin security, a rheology of blood, a oxygen supply of fabrics, immunity.

The mankind doesn't possess experience of life out of expansion of virus system.
