

Commercialization of scientific researches on creation of author's pro-biotic production

Tsinberg Mark Benyaminovich

President of Ekobios firm, MD, professor, academician of the Russian Academy of Natural Sciences, EAEN

The innovative cycle of creation of new pro-biotic preparations with use of vegetable soy raw materials, as well as their sanitary, hygienic and microbiological characteristic has been developed.

The original model of an innovative cycle includes the following main stages:

- Pilot studies;
- Patenting of results of NIR;
- Development of technical documentation on production (TU, TI);
- Research of a pilot batch in Department of Rospotrebnadzor;
- Carrying out procedure of the state registration according to the operating regulatory base;

- Production of probiotics and development of the trademark;
- Conclusion of contracts of delivery, organization of retail trade;
- Entry into the market of Russia, Kazakhstan and Belarus.

The creation and existence of 3 patents in Russia for the invention as well as 2 trademarks confirms novelty of pro-biotic preparations.

In January, 2012 for dietary supplement on a soy vegetable basis certificates on the state registration of the Customs union of "EurAsEC" ("Soya-bifidum" No. RU.77.99.11.003.E.000449.01.12 are received; "Soya-laktum" No. RU.77.99.11.003.E.000455.01.12).

Obtaining certificates of a new sample finishes a stage of commercialisation and opens big prospects for an exit to a stage of realisation specified by dietary supplement outside the Russian Federation.
