p. 4-5

Mankind is getting wiser and wiser with an access to new revelation which helps making everybody's personal life easier. Until now all discoveries have been carried out either for the sake of a body or in order to develop and increase in energy and decrease in mental activity. Huge number of equipment brought all possibilities for development to an end. In the meantime any person rests his head against time. In time is his everyday routine. In time he holds important meetings with other people. In time he estimates the duration of his life. The quality of life also depends on time expenditure. Thus imperceptibly time surrounded a person from all directions and became a substance which is worth entering.

The door in time is called care of a brain. The brain operates not only gestures but also any kind of estimation. The brain constantly gives signals to action. The brain operates all sense organs and removes from them indicators, focuses a person motivating all his activity.

Just nourish your brain or feed it correctly and it will serve you faithfully with all gratitude and appreciation as the return coefficient is always more than the investment one. Gradually monetary banks will be replaced by time banks. The most valuable storage is time storage.

Approaching the door in time, you need to know that conflict information ruins the brain; information free of friction recovers and feeds the brain. It is necessary to leave conflict information behind the gate because from the moment of an entrance to time you are expected by happiness, beauty, force and power over your own life.

p. 18-19

Consciously or subconsciously the feeling of eternity lives in each person. The human reason is reason of eternity.

The reason wants to be eternal. Moreover the reason is eternity itself. The matter or space is always infinite. A person is a unique being in whom the eternity and infinity have met. On my long supervision people do use infinity but practically unable to use eternity. Eternity is a category of time while infinity is a category of space.

The goal and the object of the Rhythmomethod 7 R0 are to familiarize people with a life in time.

Time is of the same reality and even more reality than the space when the brain is transferred to time, where it is supposed to live.

Time is a very strict value for a spatial human being. But for the creature being caught in time, it is super nice.

Time is possible to dense, time is possible to rarefy, it is possible to enter time and it is possible to leave time. In time there is a luxurious life, eternal life where different kinds of reason communicate with one another and it is possible to switch from one type of reason to another. Intellect separates from reason and it turns out that from the point of view of space all people called smart are considered to be spatial. They are able to organize their life in matter, however, any creature inside his brain and subconscious believes that the state of reason is the most sacred one.

A state of reason is directly connected with the state of enlightenment or inspiration called 'ozarenie'. 'Ozarenie' is the exact knowledge of the meaning: why this is happening now, why it happens to you and why it was recorded by you.

p. 22

Time is always changing, while space stands still. Space is condensed or loosened in the presence of force. Time creates 'life without efforts'. In space brain is getting tense, demands rest, relaxation and change. In time the brain feels comfortable, there is a feeling of never-ending inspiration, the brain is surprisingly healthy.

p. 52

Space getting dense with vibrations creates signs on time impulse. Time operates the space. Space is always in the bottom, it is denser. The task of the time is to send a correct impulse for rarefying or extracting rhythm from a cycle, then this type of a matter stops the existence, or for entering a rhythm into a cycle and forming a new form of matter existence.

p. 31

The brain in time starts to fix a huge number of states in one stage and they need to be placed in memory. On each interval (hour, minute, second, an instant) in memory different events with different extent of the coloring, different density of sign rows flow down.

p.8

A person mastering Rhythmomethod 7R0 on the finish comes to the state of a rhythmologist. Originally he chooses specialization: a rhythmologist of a body, a rhythmologist of food, a rhythmologist of clothes, a rhythmologist of money, a rhythmologist of a country, a rhythmologist of nationality and so on. All aspects of the previous activity are divided into the rhythmological pieces.
