INTRODUCTION

Population growth accompanied by rapid urbanization causes many disturbances to the natural environment [1] in particular pollution of the Bouregreg River [2,3] from several sources, such as domestic and industrial discharges, lixiviation from landfills and the garbage treatment plant [4]. Indeed, the composition of the wastewater is extremely variable according to their origin [5,6,7]. They may contain many substances, in solid or dissolved form, and many microorganisms. According to their physical, chemical, biological and health characterizations they represent, these substances can be classified into four groups: microorganisms, suspended solids, inorganic or organic trace elements and nutrients [8]. In this study we follow the variation of the concentration of some anions: CI^- , SO_4^{-2-} , NO_3^- and HCO_3^- on the conductivity of wastewater discharged into the river by a statistical treatment of analytical findings obtained.

MATERIALS AND METHODS

Sites and samples:

Bouregreg River is one of Morocco's major rivers crossing the Rabatcity and Salecity, and opening out onto the Atlantic Ocean.

Samples collected were performed during 2011 at several sites of discharges of wastewater in the downstream region of the river.

Chemical Analysis:

To study the effect of four anions (Cl⁻, $SO_4^{2^-}$, NO_3^- and HCO_3^-) in wastewater, we used a raw wastewater charged on several sites in the region downstream of the river. Wastewater samples were collected using plastic bottles, previously rinsed with distilled water. They were then stored at 4 °C during transport to the laboratory and were analyzed within 24 hours.

Fig. 1: Location of the Bouregreg River.

For measure the conductivity, the electrode is immersed in the solution and we read the value. The measurement result is shown in μ S/cm. the conductivity is measured by the unit CONSORT C831, has a temperature of 19.5 °C.

Statistical Analysis:

To determine the influence of certain chemicals on the variation the value of the conductivity of the wastewater discharged into the Bouregreg river, were determined isoresponses curves of the conductivity as a function of the anions studied using the JMP statistical discovery software [10].

RESULTS AND DISCUSSION

Effect of anions on the waste water conductivity:

The measured results of the wastewater conductivity as a function of the studied anions are given in table 1.

| Table 1: Results for the various elements in the waste water conductivity. | | | | | | |
|--|------------|----------------------|---------------------------|----------------------|----------------|---------------------|
| | sample | conductivity (µS/cm) | [Cl ⁻] (mg/L) | $[SO_4^{2-}] (mg/L)$ | [HCO3-] (mg/L) | $[NO_3^{-}] (mg/L)$ |
| | wastewater | 948 | 88.75 | 94.06 | 384.43 | 0.61 |

Modeling the waste waterconductivity:

The raw wastewater used for modeling and optimization of the conductivity was measured with levels of chlorides, sulphates, nitrates and bicarbonates are given in table 1, after it has proceeded to application of a plan experience to know the effect of these elements on the conductivity.

To find out the effect of the four anions on wastewater conductivity, we proceeded to the application of a composite plan for this, we have added four anions (Cl⁻, $SO_4^{2^-}$, NO_3^- and HCO_3^-) prepared synthetically from NaCl, MgSO₄, NaNO₃ and NaHCO₃ in 100 mL of the raw sample then we measured the response that the wastewater conductivity according to the protocol composite plan [11,12].

Experimental results:

At a temperature of 19.6 °C, we have measured thewastewater conductivity of the prepared solutions, the pH is around 8.3, and the results found are shown in Table 2, which shows the matrix of experiments:

Interpretation of results:

Using the 31 experiments, we established the mathematical expression connecting the experimental response to the coded variables. The results of calculations of model coefficients of wastewater conductivity are reported in Table 3.

The mathematical model of the conductivity as a function of the four studied anions (Cl⁻, $SO_4^{2^-}$, NO_3^{-} and HCO_3^{-}) in wastewater conductivity is written as:

A significance level of 50% (confidence level 50%) only the coefficients a_1 , a_2 , a_3 , a_{12} , a_{13} , a_{23} and a_{41} can be considered significant. The estimated wastewater conductivity model can be written as:

 $\hat{Y}_{3} = 3828,6 + 2048,3X_{1} - 1443,8 X_{2} - 893,8X_{3} + 2962,6X_{12} + 2942,6X_{31} - 2934,4X_{32} + 2990,1X_{41} \\ (\pm 0.55) \quad (\pm 0.55) \quad (\pm 0.39) \quad (\pm 0.24) \quad (\pm 0.65) \quad (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.65) \\ (\pm 0.64) \quad (\pm 0.65) \quad (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.65) \\ (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \\ (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \\ (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \\ (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \quad (\pm 0.64) \\ (\pm 0.64) \quad (\pm 0.64$

 (± 0.55) (± 0.55) (± 0.39) (± 0.24) X1: the chlorides content;

X2: the sulfates content;

X3:the bicarbonatescontent;

X12: the interaction between chlorides and sulfates;

X31: the interaction between chlorides and bicarbonates;

X32: Interaction between sulfates and bicarbonates;

A 52. Interaction between surfaces and bicarbonates,

X41: the interaction between the chlorides and nitrates;

The analysis of this model has led us to exclude the non-significant parameters ($[NO_3]$) and to highlight interactions between chlorides and sulfates, chlorides and bicarbonates, sulfates and bicarbonates, chlorides and nitrates. This last interaction will not be treated because the effect of nitrate is negligible.

Optimization of wastewater conductivity:

The mathematical model above is found for plotting the response surfaces which are shown in Fig. 2, 3 and 4 which respectively represent the isoresponses conductivity curves in the plans: ([chlorides] $(X1)^*$ [sulfates] (X2)), ([chlorides] $(X1)^*$ [bicarbonates] (X3)) and ([sulphates] $(X2)^*$ [bicarbonates] (X3)) that is to say, the most influential factors.

Optimization of $[Cl^{-}]$ *and* $[SO_{4}^{2^{-}}]$ *:*

The isoresponses curves of the conductivity represented in Fig.2 show that the optimum of chloridescontent less to 753 mg/L and a sulphates content less to 403.5 mg/L.

Optimization of the [Cl] *and the* $[HCO_3]$:

The isoresponses curves of the conductivity represented in Fig. 3 show that the optimum of chlorides content is less to 754 mg/L and carbonates content is less to 185 mg/L.

Fig.2:Isoresponses Curves of wastewater conductivity depending on the content of sulfates and chlorides. To: $[HCO_3^-] = 175 \text{ mg/L}, [NO_3^-] = 48 \text{ mg/L}.$

Fig. 3:Isoresponses curves of wastewater conductivity depending on the content of chlorides and bicarbonates. To: $[SO_4^{2-}] = 395 \text{ mg/L}, [NO_3^{-}] = 46 \text{ mg/L}.$

Optimization of $[SO_4^{2^-}]$ and $[HCO_3^{-}]$:

The isoresponses curves of the conductivity represented in Fig.4 show that the optimum of sulphates content less than 151.5 mg/L and content of bicarbonates below to 180 mg/L.

Fig. 4:Isoresponses curves of wastewater conductivity depending on the content of sulfates and bicarbonates. To: $[Cl^{-}] = 760 \text{ mg/L}, [NO_{3}^{-}] = 46 \text{ mg/L}.$

Conclusion:

The experimental research methodology used allowed us characterization, modeling and optimization the conductivity as a function of the four studied anions (chlorides (Cl⁻), sulfates ($SO_4^{2^-}$), bicarbonates (HCO_3^{-}) and nitrates(NO_3^{-}) in wastewater discharged into the Bouregreg River.

• Calculate the mathematical model of the wastewater conductivity, written in the following form:

 $\hat{Y}3 = 3828, 6 + 2048, 3X1 - 1443, 8X2 - 893, 8X3 + 2962, 6X12 + 2942, 6X31 - 2934, 4X32 + 2990, 1X41.$

 (± 0.55) (± 0.55) (± 0.39) (± 0.24) (± 0.65) (± 0.64) (± 0.64) (± 0.64) (± 0.65) With a confidence level of 50%.

• Determination of intervals optimum content of chloride, sulfates and bicarbonates in wastewater discharged into theBouregreg River.
