

The average number of in-office visits for maximum whitening is three¹² with a range of 1 to 6 visits, so the patient should be prepared for additional in-office treatments¹³.

Conclusion

Vital tooth bleaching is an effective treatment modality that can significantly change the appearance of teeth. In-office bleaching has gained a lot of popularity in the general public. The dentist must understand the differences amongst the currently available bleaching techniques and the difference in concentration of various products. The general practitioner must understand the differences of current available techniques (supervised nightguard bleaching, in-office bleaching and mass market products); the whitening solutions (carbamide and hydrogen peroxide) and its different concentration
