#### **ABSTRACT**

Standardization is used to describe all measures under taken during the manufacturing process and quality control as well as quality assurance of drug leading to its reproducible quality. Most of the traditional and classical preparation of compound medicine are effective but still they lack in its standardization. Therefore, we need to develop standard techniques to standardize and validate herbal formulations. The drug Itrifal Haamaan is therapeutically used as Blood purifier, Anti-Vitiligo, Anti-Pityriasis, Prevents premature graying of hairs and Phlegmatic diseases. The drug Itrifal Haamaan was prepared in three different batches as per the guidelines of National Formulary of Unani Medicine(Part-IV). Present study is aimed to evaluate the pharmacopoeial standards using physico-chemical parameters; HPTLC fingerprinting, quality control and assurance parameters using WHO guidelines to ascertain the quality of drug. The physico-chemical data showed that the drug contain LOD/ Moisture (9.51%), Total Ash (1.65%), Acid in-soluble Ash(0.60%), Alcohol and Water soluble extractive matters (51.07%) & (71.04%), pH(1% solution) (4.77), pH(10% solution) (4.26), Bulk Density (1.5415) gm/ml), Reducing Sugar and Non-Reducing Sugar (58.54%) & (7.79%) and the TLC/HPTLC finger prints showed various spots at 254nm, 366nm and visible light (V-S reagent). The quality control study revealed the absence of microbial load, aflatoxins, heavy metals and pesticide residues, and can be considered safe for internal use and for curing for treated patients. The evaluated standards will be very useful for laying the phamacopoeial standards and as be supporting reference of Itrifal Haamaan and also in providing the quality medicine to needful human being.

#### INTRODUCTION

Standardization and validation of ASU herbal Drugs is not an easy challenge as various factors influence the bio efficacy and reproducible therapeutic effects. In order to obtain assured quality of herbal based products, care should be taken right from the proper identification of plants, season and area of collection of the drugs and their grading, drying, extraction, purification process and rationalizing the combination in case of poly-herbal drugs, Patel *et al.*,2006.

The subject of standardization and validation of herbal drugs is massively wide and deep. There are many seemingly contradictory theories on the subject of herbal medicines and its relationship with human physiology and mental function, Yadav *et al.*,2011. For the purpose of drug standardization research work of herbal formulated products, a complete profound knowledge is of utmost important.

Historically, herbal medicines have played a significant role in the management of both minor and major medical illness, Bahuguna *et al.*,2014. The quality assurance and quality control of herbal crude drugs and formulated products are important in justifying their acceptability in modern system of medicine. Hence it is required to

conduct the research on drugs standardization to provide effective, curable and safe drugs to the needy mass suffering from various ailments.

The drug Itrifal Haamaan is one of the classical Unani poly-herbal compound formulations. The Unani drug standardization research studies of the Itrifal Haamaan is frequently recommended as a Blood purifier, for Vitiligo and Pityriasis debility. In most of the Asian, European and Arabian countries it is used since ancient times as traditional and alternative medicines. The drug has been used and Action wise reported as Daf-e-Bars (Anti-Vitiligo), Daf-e-Bahaq (Anti-Pityriasis) etc. Itrifal Haamaan is a dark semi-solid or mould brown preparation with agreeable, aromatic odour, own smell and sweetish bitter in taste. Itrifal Haamaan was reported bioactive to contain phytochemical constituents such as Alkaloids. Flavonoides, Glycosides, Tannins, trace amount of volatile oil, Resins, Crude fibers etc. The preparation of the drug in different batches is based on traditional methods in accordance with the given procedure in NFUM, Part-IV ;Anonymous, 2006,(First Edition; Kabeeruddin Hkm. Mohammed. 2002;2006 and Anasri Arzani Keemiae M.A.2006.

In present research studies of ASU. Poly Itrifal Haamaan herbal drug have investigated and carried out, determinate of Loss on drying / Moisture contents %, Ash and Acid insoluble Ash contain %, pH values- 1% aqueous solution, 10 % aqueous solution, Extractives values, w/v - Alcohol soluble, Water soluble matter %, and Reducing Sugar, Non-Reducing Sugar, Bulk density, gm/ml using physicochemical analysis techniques. Identifiably separated out of many phytochemical constituents spots by the help of HPTLC fingerprinting separation techniques examined preprepared TLC. Plates as stationary phase and applied in suitable mobile phase under treated in UV(254nm), UV(366nm) and dipped in 1% Vanillin - Sulphuric acid reagent examined under visible light region of separated spots of applied extract of drug samples mixture. Although Microbial load contamination was analysed as Total Bacterial Count, Total Fungal Count, Escherichia coli, Salmonella typhai Spp., Staphylococcus aurous microbial pathogenic bacteria's and Toxic, Hazards contamination, Heavy metals such as Lead(Pb), Cadmium(Cd), Mercury(Hg), and Arsenic (As) in ppm concentration, as well as Aflatoxins B1, Aflatoxins B2, Aflatoxine G1, Aflatoxine G2 in ppm concentration and estimation of 26 various

required Pesticide Residues in mg/kg values were estimated and analysed as per compiled through WHO./API./UPI. Standard permissible limits basis, In the concerned of Quality Assurance and Quality Control as well as Pharmacovigilance, stability studies and advance research studies of formulated drug aspects of said investigated, analysed and estimated were essentially mandatory parameters for the purpose of evolution of safety and efficacy and drug standardization research of the drugs, Sagar et al.,2015.

#### MATERIAL AND METHODS

Ingredients used for preparation are given in Table a.

#### **Drug preparation:**

The formulated drug was prepared in different batches at Laboratory scale as per the ingredients compositions and guidelines of NFUM IV <sup>13-14,16,19</sup> classical text basis. The required quantities of all the ingredients were taken the pharmacopoeial quality. In these preparation of process take ingredients no. 1-17 and 19-22 were Cleaned, dried and powdered the said ingredient numbers sieved through mesh no.80 and kept separately. Ingredient no.18 was cleaned and its paste was prepared,

Heated the ingredients no. 23 was heated in a vessel on low flame until it boiled. The vessel was removed from the fire and immediately the paste of ingredient no. 18added along with Sodium Benzoate(0.1%) Sodium methyl paraven(0.05%)Sodium propyl and paraven (0.02%) which are used as a antimicrobial, drug and food preservatives,

powders of ingredient no. 1-17, 19-22 and mixed thoroughly to prepare a homogenous product. The preparation was allowed to cool to room temperature and stored in a tightly closed glass containerfree from moisture.

**Table a** The raw drug formulation is composed of the following mention ingredients:

#### Pharmacopoeial standards:

Pharmacopoeial research studies such as organoleptic characters, microscopical, macroscopical and physicochemical, TLC/HPLC., quality control and quality assurance parameters were carried out

- 1. Organoleptic Evaluation: Organoleptic evaluation refers to evaluation of formulation by colour, odour, taste, texture etc., using the sensory organs of our body. The organoleptic characters of the drugs samples were carried out based on the method described by Siddiqui *et al* <sup>23</sup>.
- 2. Physico-chemical analysis: If the Water content of the drug is high it will easily deteriorate due to fungus, The Ash content indicates the total amount of inorganic material after complete incineration and the Acid insoluble ash is indicative of silicate impuritiespresent due to improper washing of the drug. The Alcohol and Water soluble extractives indicate the amount of active chemical constituents in a given amount of particular drug when extracted with respective solvents. Some of the useful tools in standardization of ASU herbal products such as Moisture content of the powdered sample at 105°C, Ash values, Acid insoluble ash, Solubility in water and alcohol, pH values and Bulk density etc., were studies as per standard methods <sup>26</sup>.
- 3. TLC/HPTLC finger printing analysis: The drug samples (2gm) were soaked in

chloroform and alcohol separately for 18 hours and refluxed for ten minutes on water bath and filtered through What man N0.1 filter paper. The filtrates were concentrates and made up to 10 ml in volumetric flask with respective solvents. The procedure followed for the analysis of TLC and HPTLC was as per the standard method of Sagar *et al.*, Wagner and Biadi <sup>1-2,20,22</sup>.

4. Quality assurance and quality control parameters: The usage of ASU, herbal products along with higher safety margins, WHO has taken necessary steps to ensure quality assurance and quality control parameters with the modern techniques and application of suitable standards, The microbial load and heavy metal parameters using the tested powder drug were carried out as per the WHO guidelines <sup>20</sup>. The heavy metals were analyzed by Atomic 6-12,17-18 Spectroscopy Absorption Aflatoxins were estimated by Kobra cell techniques using Agilent **HPLC** instruments as per the method ASTA <sup>27</sup> and pesticide residues were analyzed using GC-MS Agilent instruments equipped with Mass selective detector as per the method AOAC 1-2,17-18.

#### **RESULT AND DISCUSSION**

Organoleptic character of the formulated drug indicates that the drug is dark brown

semi-solid, mould drugform with agreeable aromatic odour,own smell and sweetish bitter in taste. The physico-chemical analysis such as LOD/Moisture content obtained in the drug was 9.51 % shows the amount of moisture present in the drug. The alcohol and water soluble extractives (51.07 % and 71.04 %) respectively might be due to presence of polar organic bio active chemical constituents and indicate the presence of inorganic constituents total Ash (1.65 %) and Acid in-soluble ash (0.60

%) indicate the presence of inorganic and metals form of substances, pH (1 % solution) (4.77), pH (10 % solution) (4.26), Alcohol soluble extractive ,ASE (51.07 %) and Water soluble extractive, WSE (71.04 %), Bulk density of granules(1.5418),Reducing Sugar and Non-Reducing Sugar (58.53) & (7.79)analyzed parameters were revealed of pharmacopeial parameters of semi-solid, mould form drug shown in (Table-1) respectively.

**Table 1** Physico-chemical parameters

# **Quality Assurance and Quality Control Parameters:**

The analysis of microbial load (Table 4) present in the drug showed that the total bacterial count (TBC) and total fungal count(TFC) was revealed 600 and 500 cfu/gm. The detection of themicrobial load was under the permissible limits of WHO guideline.

Table 4 Analysis of Microbial load

## **CONCLUSION**

In the present investigated research study various standardization parameters such as physico-chemical, TLC / HPTLC finger print and WHO parameters were revealed and carried out can be laid down as reference standards for the analysed compound drug. From the present studies it

can be concluded that the formulated Itrifal Haamaanis safe, effective, free from any toxic, hazardous substance it is an economic drugand the efficacy of the drug can be effectively used in traditional alternative medicine as a Blood purifier, Anti-Vitiligo, Anti-Pityriasis, Prevents premature graying of

hairs and Phlegmatic diseases. Referential information have also been evaluated by conducting the clinical studies on patients suffering of Vitiligoand PityriasisPrevents premature graying of hairs and Phlegmatic diseases and an be considered incorporation of pharmacopoeial monograph.

#### **ACKNOWLEDGMANT**

The authors are extremely thankful to the Director General, CCRUM, New Delhi, under Ministry of AYUSH., Govt. of India for his valuable guidance, encouragement and for providing necessary research facilities to carry out the research studies as well as also thankful to all dedicated research staff of the research Institute for providing full cooperation and support to complete this research work.
